I can't use it, seems only for XP or SSE CPU.
Named "modern" but look like nice classic, interesting how it sounds.DJ wrote:

No one has advocated military disarmament in this thread.

My point is that it's important to operate from a position of strength
derived from rational planning, rather than fear-based, panicked,
knee-jerk responses, the latter being open to direct manipulation by
terrorists (and by self-serving politicians, for that matter). Can we
not agree on that?

> "...the only thing we have to fear is fear itself" FDR in another context.

> sabatoeurs.

Exactly, and I noted the different context. However the quote is germane.

Speaking of ex-presidents and war, Eisenhower said this:

"This conjunction of an immense military establishment and a large arms
industry is new in the American experience. The total
influence-economic, political, even spiritual-is felt in every city,
every state house, every office of the Federal government. We recognize
the imperative need for this development. Yet we must not fail to
comprehend its grave implications. Our toil, resources and livelihood
are all involved; so is the very structure of our society.

In the councils of government, we must guard against the acquisition of
unwarranted influence, whether sought or unsought, by the
military-industrial complex. The potential for the disastrous rise of
misplaced power exists and will persist.

We must never let the weight of this combination endanger our liberties
or democratic processes. We should take nothing for granted only an
alert and knowledgeable citizenry can compel the proper meshing of huge
industrial and military machinery of defense with our peaceful methods
and goals, so that security and liberty may prosper together."

>> At any rate, it would be inaccurate to imply that anyone who doesn't agree
>> with a particular course of action is blind, deaf and dumb to potential
>> threats. <

OK, we agree on that, right?

> It would be inaccurate to imply that wars have not *always* required great
> sacrifices from the citizenry of the respective combatants.

Right, no one has advocated a sacrifice-free response in this thread.
Although our current president and congress have actively worked to make
it seem like little sacrifice has been required by, for the first time
in history (correct me if I'm wrong), cutting taxes in time of war. Of
course this only delays the sacrifice a generation or two.

We should, however, be very aware and careful to not sacrifice the essence of American freedom and human rights to the altar of terrorism.

>> Not a true nor useful characterization. Divisive at
> best. And dividing ourselves IS one road to defeat.<
>
> I agree 100%. It seems that half the folks in this country believe we are in

Then we can be united despite our differences. Like a composite material with fibers in different layers running in different directions we can be bonded together, stronger for our union. :^)

IOW, it's OK that we sometimes think differently, as long as we listen to each other, respect each other and can consider each other's viewpoints. We can draw on all of our strengths to innovate workable solutions.

> a war, the other half don't. This is a sure recipe for disaster, especially
> in a war with an enemy who uses our own laws against us. To ignore this in
> an era where one person with a bomb can wipe out an entire city is a recipe
> for disaster on an unimaginable scale.

The price of freedom is eternal vigilance. We must defend BOTH against a crafty enemy AND against those who would sacrifice the ideals and freedoms of our country. We must not lose the war in order to win the battle. And we must not lose that battle.

We must choose paths that serve both our citizens and the people of the world, not those that best serve the military industrial complexes of the world's nations, nor the short term interests of short-sighted international corporations, nor the power ambitions of a any obsessive wannabe despots. This will take leadership in a style not seen for quite a while in these parts.

Fear-based thinking on either side of a conflict props up illegitimate power.

This is among the top dangers of major aspects of our current course. While trying to appear "not weak" we run the risk of making it easy for those against us to use our missteps, missed opportunities and overreactions to literally scare up more and more followers.

As part of a well considered and comprehensive defense, we must interrupt this dynamic. To not do so would be to fight with one arm tied behind our back.

We need to think very long term, we need to look at alleviating root causes of conflict and we need to consider the best interests of the nations and citizens involved. As long as we don't, we are fighting without a complete defense and we are in danger of blundering into trap after trap, draining our resources and weakening our position.

Cheers,
-Jamie

orism.
>

The patriot act and NSA wiretaps (immediate-no ***ing around trying to get a warrant when you don't even know what you're really looking to find) are the weapons I'm talking about here. It'sd a shame but our laws in this respect have become our enemy's weapon. In order to deprive him of it, we must sacrifice it.

something. Remorse?
Regret? Concern? And gave us the 'military-industrial complex.' Interestingly, the original drafts had the phrase as 'military-industrial-congressional complex' which is quite more accurate as we see our congress funding Navy installations in home district in Nebraska while transport vehicles in Iraq are not armored. But I guess even Ike wasn't feeling _that_ guilty, or he was talked down from including our noble representatives in his thoughtful complex.

But nevertheless Ike has always fascinated me, far more than other 20th century presidents like Kennedy or Truman or even Roosevelt. As we learn more about just how reckless JFK was, politically as well as personally, the mild mannered moderate conservatism of Eisenhower seems compelling. But one also has to wonder why, if he knew what was happening, he didn't warn of that military-industrial complex earlier and actually do something to fight it. By the time he retired, the goose was pretty much cooked, to all of our neverending detriment.

Neil,
I haven't done this yet but FX-Teleport is the mothership here. The =
plugins
and softsynths will need to reside in the 'client' comp to be accessed =
from
the Host. FXT says the presets and all relevant data is saved within =
the
host. It's a wrapper that assigns the VST plugins to the LAN connection
from one VST location to the other. I think it can go bidirectional.
http://www.fx-max.com/fxt/product.html
Tom

"Neil" <OIUOIU@OIU.com> wrote in message news:4554c544$1@linux...

How does the receiving computer's audio application know how to
break up the data stream? For example, let's say you're sending
24 channels of audio through your LAN card & cables from computer "A" =
to
computer "B"... how do you assign where the
various channels are going once it gets to computer "B"?

This is interesting.

How =
does=20
  the receiving computer's audio application know how to
break up the =
data=20
  stream? For example, let's say you're sending
24 channels of audio =
through=20
  your LAN card & cables from computer "A" to
computer "B"... how =
do you=20
  assign where the
various channels are going once it gets to =
computer=20
  "B"?

This is interesting.
