ong (which will temporarily fix the problem), especially if there are a lot of sample-based instruments that take time to reload.

To see if your system shows the problem, record some soft synth tracks, put your sequence in cycle mode and let it play for a while. Randomly the bug causes soft synths to start dropping out. It could happen within a few minutes or it could happen in an hour. It seems random. I've seen all the soft synths stop playing eventually, and they will also stop playing in response to MIDI input. This happens with Logic 5, 6 and 7, and perhaps 4. It happens with Logic's own soft synths and with 3rd party soft synths.

It was reported to be less frequent with Logic 7.2 but still there. I didn't originally do the "crossgrade" from 7.1 to 7.2 because it's mostly about running on Intel and I don't have an Intel Mac. But I've ordered it now because this new 7.2.1 update requires 7.2.

I mentioned this problem (and a couple of others) at a logic demo that came through town a few months ago and there were murmurs of agreement throughout the room. I've mentioned it on [OSXaudio.com](#) and others have also reported the problem there.

I told eMagic about it years ago when Logic was at version 4 or 5, and also reported it to Apple's official bug report site (after Apple bought out eMagic). Apple put in a cool automated bug report generator but since this bug doesn't crash the program, it's not caught and reported that way. They have fixed crashy bugs along the way, though, so that bug reporting system is a cool thing.

Anyhoo, after the recent Logic demo the cool person doing the demoing gave me his email at Apple and I sent a detailed report to him that he passed along to the programming team. Dunno if that helped or if they were already, finally, onto the problem.

Anyway, the new version arrives here on Wednesday. Here's hoping.

Cheers,  
-Jamie

get="\_blank">http://www.txmicro.com=20

(245) 16MB Matrox G450 (Dual Monitor) 4x AGP Video Card --1+ \$ 7.49=20

These should load up in WinXP w/o and drivers from Matrox, and =  
that's how I recommend you do it. I'm posting this mainly for the Win =  
ME/98 crowd though.... seemed to play much better in that OS. This is =  
not the same as the 32Mb version of this model but if you've been =  
counting pennies to go Dual Monitor or already have one and need a =

backup, this is probably as good as it's gonna get for those situations. =

PS: I only started buying from this vendor recently, but I've had no =  
troubles at all so far and they deal with older (ahem.. vintage) =  
computer parts mostly that I can see - which is perfect for a Parisite.=20

>Very sad. When I started to get interested in audio engineering about 20  
years ago, I bought a MIX magazine and his column was one of the first  
things I read. I had no idea what he was talking about but I figured I would  
eventually.

Many years later it really knocked me out when, after I bought PARIS, I  
found out it was his company that designed it.

Small world.

Talking to him on the NG and in the chats was always very interesting and  
insightful.

I will remember him fondly.
