For all we know he may be painfully shy and this is helping him step out, not an easy thing. We don't know his inner dialogue. Note his sidelong grin to who? Mom? Lookit me! Music is a cool realm for kids to experience challenge and achievement. Adults too, for that matter.

As he builds on a growing technical virtuosity and matures he'll have a rich vocabulary to draw on.

Wouldn't be 'that' hard.. I'll stick a pair of my JBL's out on the porch,
set up the ole audio/midi computer and tie it into my midi to light pack
convertors that feed whatever lights I want. program up a coupla tunes, and
let it rinse/repeat for a few hours every night.

>studio, but PT HD would cost a couple of arms and legs.

Is there any way to calculate/estimate how much \$\$\$ you lose over the course of a year for not having an HD system? If so, then would that equate to sufficiently more than the annual cost of it would cost you to financing or leasing one? If that turns out to be the case, that might be a good investment simply becasue it'll help put more bucks in your pocket.

Another alternative might be getting an LE system with the Digi-002... the convertors on those aren't as good as the ones you'd get with an HD rig, but they don't completely suck, and it would allow you to bring in PT projects for overdubs, or even start projects off with basic tracks & the client might then go to another studio with a bigger PT rig for completion & mixdown.

Not that I'm a newly-minted PT fan, but I'm just thinking in practical terms.

Dimitrios,
Rendering is your answer. Don't render tracks with plugins. In stereo =
the right side=20
won't have any effect. Double check t

Subject: Re: Can the Mobo or system corrupt Audio drives??? still wierd

o see that their timing is correct =
too.
Some people have problems with that.

There you have the problem. I think rendering the tracks and look =
after that=20

each stereopair is starting and ending at the same places will do the =
job=20
when saving under a new name, just to be sure to go back if something =
are=20
going wrong again. If the time alignments are going wrong in some of =
the=20
stereofiles, you can rendering the old, hard way, as in version 2, =
when=20
mixing down each stereopair with panning hard left and right and =
muting all=20
other tracks. Then you can import them into the project again on their =
old=20
places and give them new names.
