The problem was that the EDS compressors were not working for the channel inserts. It was frustrating since I really like using them and all the other insert efx were working.

I'm a big fan of Chuck's plugins and had installed all of them.

Deej, sounds like you live in an ideal spot..start the coffee pot, I'll be  
up there in a couple hours...

:)Somewhere there exists MSWindows software that can read a mac disk. Don't know the name off hand but if you search you'll find it. Buy it, install it and see if you can read the OSX partition from XP.

But first I'd try booting off of the OSX system CD and see if you can see the internal OSX partition. If so you may be able to copy files off of it directly.

Or get Disk Warrior, boot OSX off of its CD and use the included tools to rescue the OSX partition and back it up to an external drive.

Or take it to an Apple store genius bar along with your external drive, ask nicely and they'll run Disk Warrior and do the backup for you.

Cheers,
