from those days also had a reunion and played for the reunion dance. :) But it was also just fun seeing who changed, who didn't, what they were doing for a living, etc. And it was pleasantly strange to find myself to interested in everyone, because in high school I was pretty much a misanthropic recluse outside of our band gigs.

The nightly thunderstorms were fun, too. (June in eastern Montana).

you did Sarah.

DCThe best orchestra, choir, brass band, etc mic pre on the planet.

Sweet, natural and uncolored. Totally uncolored.

In a pop or jazz setting they work well on acoustic guitar, drum overheads, kick, and piano and anywhere you want natural sound.

If you want any tone to be added by the mic pre, this is not for you.
If you want to hear your mics for the first time, you will love it.

DC

e top of my wishlist was a true sub-notebook. Something I could throw in a portfolio or briefcase for short hops."

Since he's not complaining about a lack of ports, I don't know why the Air doesn't fulfill that role for him. Maybe he's too cool to buy the base version with the hard drive.

He did like the movie rentals, which I think may be the most important announcement of MacWorld for future impact on Apple's growth. He did like the Time Capsule, which is at least interesting. He hates the iPhone and AT&T, so he'll just have to keep complaining about that until their exclusive relationship ends.

Cheers,
-Jamie

of desktops. So his point is based on his opening comments about being enamoured with all things Apple. Sure, he could have gone cheaper, but money is hardly a concern for Shelly considering his success - it's just a reference point that he could have spent 1/3 of what he did and accomplished the same amount of work, but being enamoured with Apple, he goes for the gold instead. In other words, he's a victim of clever marketing - getting you to buy way more than you need or want.

When you have the option to pay \$1000 or less and get the same job done (depending on what job you are trying to accomplish of course), vs. going with a brand mainly to be brand loyal and hip while having no choice under \$2-4k or more, how else do you evaluate the two options?

His comparison may not be technically fair on the Air, but he is right - when it comes down to getting the job done, any advantage to Air vs a regular laptop fade away pretty quickly, and you are left with a much smaller drive for a lot more money.

Regards,
Dedric

I don't think that's what he's saying. The box he's complaining about is under \$2K (configured the way most people who care about price would buy it). Just because he stupidly overpaid for his Mac doesn't mean others will. But if that's your complaint, there are Macs for less than \$2k.

If the general complaint about Apple is price, then it should be noted that the new desktop boxes are less expensive than Dell's, and the new super light notebook is less expensive than Sony's (and under 2K in the standard configuration).

- > The MacBook, feels cheap, and while it has good specs and isn't really

Other than the Mac Mini and iMac. Oh, you mean laptops. Yes, except for the low end MacBook Pro and the new MacBook Air, sans flash drive. As for "feeling cheap," the MacBook does have a plastic case. But my wife has one (G4 version); it seems reasonably rugged and has held up well. It also gets better wireless reception than my metal-clad Powerbook.

It's good to have choices. Apple is only one choice. If another choice is better for you, by all means buy it. If everyone bought a Mac, Apple would be insufferable. :^)

Competition is good. On the flip side, if Apple weren't pushing the envelope, the other companies building commodity MSWindows boxes would be less motivated to give you stuff you like. So keep buying what moves you, be it Apple or someone else.

Choice is good. Competition is good.

Apple no more has its customers where it wants them than Microsoft has
theirs well thumbed over. For example you yourself are trapped in
Microsoftland by your committed investments there.

> re: BeOS.... same here.

Yep. Sigh... Yet another reason to mistrust Apple, to an extent, and Microsoft to a much larger extent.

f iPhone users don't like AT&T.

Yes, a gamble by Apple to go big with one company instead of trying to

hit the wider market. It didn't make me switch either.

OTOH, maybe it was a way to ramp up production and hit the new market on favorable terms. The exclusive will be over after the two year (I think) period. By then maybe Apple will be better prepared to make necessary further agreements with more carriers, have more production capability, have proven the iPhone design and improved it, and will be ready to serve wider markets. I imagine the logistics of creating, manufacturing and marketing a new product like that is nothing to sneeze at.

> I thought we all agreed choice was a good thing? Was I wrong in that
> assumption?

No. While I can understand why Apple would choose to start out that way with the iPhone in a crowded new market, I am content to wait out the iPhone and see what happens down the line. Also, there are changes afoot with regulations, other competition, and available frequencies.

No, wait, your mom wears army boots and can't cook onions worth beans!
Just wanted to get that in. ;^)

Cheers,
