Channel B 6:1, slow attack med release.
With the right input levels, I have had this setup competitive with the best
LA2A, or ADL 1000 sounds I have ever reached. I did try to reproduce this
with the 33609, but I lost all the magic.

Feed Forward give a very dependable 0-over limiter, although for sound I
still prefer to use Feed Back mode and finalize with a digital limiter. This
little box offers a lot of options and a lot of mojo.
