running much too smoothly here and I need something to fret about. ;o)

Actually, the thing that sorta' triggered this was my seeing 64 bit PCI host cards as upgrades to existing Magma's and for a fleeting moment, I thought I might be able to upgrade my existing 13 slot chassis that uses a round SCSI cable to a 64 bit system by just getting a new host card.....but noooooo!!!!!!

Well, it's a phone/media player/PDA/camera (what did I leave out?). The "reinvention" really has to do with the finger-touch-screen interface, right? So we'll see if it lives up to the hype when it ships.

Heh. It's a good thing you're immune to hyped advertising because we're surrounded by it from all directions.

They can claim whatever they want, as long as the next version is at least as solid as the current version, further streamlined in the UI, and no less capable. :^)

Cheers,
