>Kim, I have experimented with mastering this way a lot. And yes, sometimes that does happen. What I notice is, stereo imaging will jump around. I know Sakis uses this method, with success so it's probably a matter of getting every set right. I'm just not that good!
Now here's the good news for PC guys. Using Matt Craig's comp. you check the stereo box and have a stereo Paris comp...pre eq.
Rod

I have that plugin, and would be happy to e-mail it to anyone who needs it (which I assume Matt would be OK with, since he made it available for free). If anyone needs it, shoot me an e-mail so I can reply to it with the file attached. My e-mail is: neil DOT henderson AT sbcglobal DOT net.

IMO, however, I disagree with those who say it sounds EXACTLY like the embedded Paris EQ... the low end reacts a bit differently, methinks. But then, that could be because I'm using it at 88.2k, which Matt himself told me he wasn't sure if it would work with that samplerate or not (it does).

Also, for you guys who are considering getting into mastering,

you absolutely need to check out Ozone as a much less labor-intensive alternative to the method Don brought up herein; you can get your multiband compression, limiting & expansion (4 bands), a high-quality maximizer, exciter, mastering reverb, several types of dithering, a stereo imager/enhancer (be careful! use sparingly!), and a FANTASTIC linear-

>>Globals are in PARIS_FX.VAR. If you have them in the projects you can load
the project and move them to globals.

LIBRARY presets are saved in the PARIS_FX.VAR file
in C:\Program Files\Paris3 (your Paris root dir).

PARIS_Fx.var (Default) is a backup of the file
PARIS_Fx.var that gets modified when you make library presets.

>I'll get back to CD burns in a bit, but none of these kind of 'alt fuels'
really work all that well. For now, fuel cells (hydrogen of any kind, liquid,
gas, or chemically turned into a solid that can be used to release it) involves
massive expenditure of other kinds of energy, usually electricity. In that
case in the US it means coal/natural gas/nuclear power. There are only three
energy sources that are 'free' and those are solar, wind, and geothermal.
In fact, both are eventually related to the sun anyway, but because they
are tapped in practically different ways we can think of them as free. In
the long run they will have to be used if we want to be energy neutral. We'll
also have to stop eating cheeseburgers because a whole lot of methane in
the atmosphere (and methane is a much worse greenhouse gas than carbon dioxide)
is cow farts.

In any case, for short term solutions there really is just ethanol. It's
attractive for a couple of reasons. It's a liquid not too much more volatile
than gasoline. It's a nearly a net zero on greenhouse gases (the carbon taken
out of the air by the plant that becomes ethanol helps cancel out the carbon
produced when it's burned) and it works now. Brazil runs mos
