which
A, B, C at all times. this will give you the info as to
how
& the
& cards are initializing and which card is card A, B, C as you
start
adding more hardware. the MEC i sent you is one of 4 that
were
working
perfectly when I took my system off line. I can't imagine
it
being
a
problem. Bent pins on SCSI cables can be a serious
issue
though.
Your
system will not function with bad SCSI cables.
