emember how ugly the place was during the Paris vs PT wars, but I've had  
>>  
>> a  
>>  
>>>pretty civil relationship with Dorsey, Rivers and a few more of those  
>>>guys.....as long as we don't talk politics ;o). The Chevdo dude is  
>>>pretty obnoxious, but maybe he has good reason to be. Thanks for the heads  
>>>up.  
>>>

>Three little old ladies named Gertrude, Maude and Tilly were sitting on a park bench having a quiet conversation when a flasher approached from across the park. The flasher came up to the ladies, stood right in front of them and opened his trench coat.

Gertrude immediately had a stroke.

Then Maude also had a stroke.

But Tilly, being older and more feeble, couldn't reach that far.

Have a nice day Parisians !Great solo in the middle too !! Excellent

I wouldnt worry about it.

It sounds good.  
These are by no means audiophile speakers.  
There doesn't appear to be any processing on the  
signal from my sound card.  
If I get a chance I will listen to it at the studio so I can  
hear what it really sounds like.

e. when they go they go; you just reboot and hope the audio  
files are still there...especially with macs.

>  
> <http://www.gizmodo.com/gadgets/cars/moonbeam-100mpg-homemade-car-202834.php>My two  
biggest frustrations w/ Paris are (in order of importance to me):

- 1) Can't use cool new plugins like UAD-1's Neve EQ, Waves IR-1 reverbs,  
VocAlign, Pitch'n'Time, etc.
- 2) Not being able to automate sends, EQs and plugin parameters.

I've learned to live w/ the bugs and other quirks. I also have DP and PT LE. I haven't tried Logic yet. I have friends who use Nuendo and love it, but I don't know if that's the best way to go for a Mac Dude like me.

God help me... I still love the way Paris sounds!

>I'm currently using Logic Pro on a dual 2.5GHZ G5 Mac with 2.5GB RAM  
(room for 8GB). Plenty fast for tons of tracks, FX and soft synths, and  
Logic comes with a good selection of both. I've added some additional  
Audio Unit soft synths.

I have had Logic quit on me but I have never lost an audio track or a project file and I've been using Logic for a few years now. With the last few Logic updates the stability is improved and they finally fixed my top three bugs (see other threads).

OSX runs here for weeks/months without rebooting. Journaled file system, decent security, reasonable multi-tasking. Nice system for video editing and animation/graphics, too.

Cheers,

>Hi,

I am interested in what services some of you may be able to offer in relation to multi-track drum editing.

Since I'm a Paris user I thought it'd be good to ask the group to see what editing servies might be available. I'm in the UK but am happy to work remotely on this (e.g. by sending files by post on DVD).

During a recent session, I recorded a drummer playing some drum tracks to a click (multi-tracked to 12 x 24 bit wav files). Unfortunately the performances are not tight enough and need micro-editing, either by hand, or perhaps using Cubase SX3's audio quantising / ProTools Beat Mapper or similar). I suspect the former would give the best results, but since the playing is off throughout most of the performance, this could be rather time consuming. Sensitivity will need to be paid to the groove and feel of the music, rather than a straight 100% iterative quantize.

The drum parts are generally very simple. The style is hard to describe, but broadly speaking it is alternative folk, but with rock / jazz / world and other influences. Each song is under 5 minutes; and there are between 1 and 5 songs requiring attention.

I'd be gratefull if you could let me know what services you can offer that might be of assistance, what your proposed working method would be and what your rates for each of them would be, both per hour and per song. It would also be useful to have an idea of how long the project would take you to complete (i.e. not just the working hours but estimated time to overall completion).

Unfortunately the band this is for is currently unsigned and so the budget is somewhat limited. They are, however, quite perfectionist and interested in obtaining a professional product.

Many thanks in advance.

Kind regards,

Daniel

- the model. We had a Dell for video
- editing at a previous job - tried to add a new video card to get a dual
- display and it caused nothing but headaches, but I attributed that to a
- cheap motherboard more than anything (everything in this model was cheap/not
- industry standard).

I built a custom system for them and it ran great.

If you are mixing RME cards (or others even) and UAD-1s (then add firewire audio perhaps), I wouldn't go off the shelf and expect great results - motherboards are too fickle (e.g. you could get stuck with a chipset that isn't going to work or a slow PCI buss, unless you go PCI-E, then it could be a toss up until you test it in practice). Otherwise, TI firewire, DDR2, SATA, etc should be fine, unless you go SATA raid.... (may work fine in typical data storage, but with audio chipsets can be problematic if you run really high track counts).

>If you've never done this, let me offer a big gotcha I've run into before you blow a wad of cash on edits.

If the other tracks are playing to these 'grooves', you'll be redoing them too. Reason? Once you move the drums around the other parts will need to follow it because that timing reference is now gone.

However, if you played the other guys in on the click, that's a good thing.

shy away from some 'commodity' manufacturers  
but when I look under the hood these days it looks like they're using nearly  
identical core chipsets to the ASUS and Chaintechs of the world. The differences  
are in extras, gigabit networking, Promise SATA controllers, stuff like that.

Maybe I'll test the theory. My old audio machine (an old Athlon box) is in  
bad shape. I was going to hold out for a fancy quad core but maybe I'll snap  
up one of these Dells and see if I can make into an audio box.

Anybody want to bet against me?

At \$7500.00 (for the VF-14 model), it's \$2000.00 more than the Wunderaudio U47 clone.

<http://www.wunderaudio.com/CM7product.html>

Mike Castoro at Wunderaudio has a bunch of old '47's and I'm sure Telefunken has a few in their closet. I wonder if they will have originals available to A/B with the clones? (and yeah..I know the old ones all sound different so what's the use-still I'm interested)?

Call me afterward and tell me which one I will have to have or I'll die. Funny... I'm in the midst of a project in which I'm having to do much drum editing, sometimes with a click, sometimes without. There were a few tunes that needed so much repair that I convinced them to re-record them. I almost had them convinced to use a real studio drummer, but alas, they decided that a band is a band, and the old drummer came back. He did better, but he's still not a great studio player. There are so many little things that go

good points... these guys could EASILY spend more \$\$\$ in edits than on re-tracking the whole thing - and they still may have to retrack the "other than drums" parts.

These guys are picky & want to do it right, but can't nail it themselves? Here's my advice in that scenario, FWTFIW:

- 1.) get a MIDI track going with a rudimentary programmed drum track for the rest of the guys to play with.
- 2.) once the basic rhythm tracks are done, have the drummer play along with these, but mute the MIDI drums.
- 3.) Have someone who's got either PT with Beat Detective - or something like CubaseV3 so they can create audio slices from the hitpoints - edit the drummer's tracks to the MIDI groove. They don't have to nail everything down perfectly locked if you want it to swing a little.

In this case, I think that'd be the best way to go... and probably the least expensive, as well. Either way, you're gonna have to retrack the other instruments if you edit the drums - if they're as off as much & as often as you say they are.

>>>>Thanks for the responses guys. Fortunately the only thing that's been tracked  
apart from drums is the vocals and some percussion, both of which were recorded  
to the click (although there may have been some drums in the monitor mix).

I'm holding back on everything else because the groove needs to sit around the drums.

Listening back again, the drum tracks aren't awful, but their not rock solid (enough). I suspect my problems with the editing are more to do with my ineptitude as a drum editor than the size of the task. I suspect someone experienced with ProTools BeatMapper or Cubase SX3 could do a pretty speedy job.

That said, I'm also looking into getting the parts re-drummed by a session pro, which may well be cheaper and produce better results (annoyingly I've got kind of attached to the recorded sound of the existing tracks...).

I'm just costing out options at the moment, so I'll let you all know how it pans out.

Thanks,  
Dan

a.) How many tracks are the drums themselves on?

b.) How did the singer record vocals to the drums only (i.e.: with no pitch reference from any instruments)?

Not that one question has anything to do with the other, but I was just wondering.

Holding out for 8000-core chips due in 6 years. That should be fast.

>Ah, OK. "Reboot" means to restart the OS, something that's very rarely  
necessary with OSX.

Starting Logic again if it quits makes sense. Logic has quit on me also, but the last few updates have made it much more stable while fixing the most annoying (to me) bugs. Logic hasn't lost any data here even during its least stable period. It seems pretty reliable now and the feature set is amazing.

Logic has progressed to the point where I can now recommend it.

Cheers,  
-Jamie

I did everything Rod suggested. All plugins work. That's the good =  
part.  
The bad part is that as Paris starts up it still gives me a pop up =  
saying:  
"Wrapper cannot find Pultec-Pro mono/stereo. You may have removed these  
plugins. We suggest you replace them and blah blah blah..."

I have a clean UAD-1 4.4 install after having removed all the UAD stuff. =  
I cleaned out  
the Wrapper too and started from scratch there. The worst part of all =  
this is  
I always COE now. I can't even close a project without it crashing. I =  
can save thankfully.

Any more suggestions?  
Tom

-----=\_NextPart\_000\_01AF\_01C6E241.22DA95E0--Lo!

I think we're heading towards re-recording the drums (with a session drummer).  
Probably easier and much better results! I guess we went with option 1!

Neil - drums are recorded across 12 channels (though probably unnecessary  
to use them all). Not the greatest selection of mics, but that's the extent  
of the mic cupboard:

AKG D112 inside Kick  
Shure SM57 outside Kick (poorly positioned, however!)  
Shure SM57 Snare top  
Shure SM57 Snare bottom  
2 x Studio Projects C4s as XY stereo overheads  
AKG C1000s Ride  
AKG C1000s Crash  
AT4033a Hi Hat  
AKG C418 Hi Tom  
AKG C418 Mid Tom  
AKG C418 Low Tom

As for qu 2: Guitar guitar recorded to a click; then guide vocals; then drums.

Then we'll re-record everything (drums apart). A little long winded, but getting the band in the same room together at the same time proved impossible. Fortunately not a band politics issue - more a schedule thing!

Best wishes,  
Dan

>I seem to have discovered the trouble. While mixing my last album I had to get a new dual head pci card. (old matrox agp card died.) Well it was no problem mixing but it didn't like it when I started tracking pre pro for our new cd. I bought a ati radeon 7000 agp card to replace the pci card and all seems well.

I am thinking of getting a used magna pci to pci expansion chassis so I can add two more monitors and maybe a third eds card.

Thanks to everyone who offered there help. I hadn't been to this newsgroup in quite a while and I was pleased to see I wasn't the only one in the world still going strong with paris.

Nice kit. Also love the song - and this mix has plenty of bottom end, which gives it a lot of power. For my taste, a lot of prog has what I call the "Mike Stone Effect" - everything below roughly 150Hz seems to be rolled off.

This one is plenty ballsy. I like it. Y'all got a followup to "Big Buildings" coming soon?

pabAre you talking about the big Mark Lewisohn book with all the details of each session? I love that thing. I loved the story about getting that piercing guitar sound in "Ticket To Ride" I think it was, and how they got in trouble for abusing the board. Hours of fun for Beatle babies.

>Yes, I own The Rutles on DVD, as well as the complete soundtrack CD. Neil Innes songs are like parallel universe Beatle songs, and he sounds amazingly like John Lennon. It's interesting that "The Rutles" parallels the documentary "The Compleat Beatles," because I believe "The Rutles" was made first.

Anyway, great stuff. "I know you know what you are but you should know by now that you're not me" - From Piggy In the Middle by the Rutles.

And by the "Mike Stone Effect", I mean just listen to the first two Asia albums and Whitesnake's followup to "Slide It In". "Slide" was produced by Martin Birch, a guy who knew how to get that sound. "Whitesnake" was produced by Stone, who completely glossed up and neutered the whole damn thing.

I would pay good money to have anyone else remix the first two Asia albums, since I know Wetton's bass is in there somewhere. And they had Carl Freakin' Palmer on drums! Apparently without a kick...

I'd love to hear more of the new stuff when you feel like doling it out, Neil.

It's not crashing every time on exit. It was iffy when changing older projects from internal to external clock. That may be the culprit with the crashing. The question boxes still pop up when Paris starts though. Annoying.

Tom

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =

I did everything Rod suggested. All plugins work. That's the good =  
part.

The bad part is that as Paris starts up it still gives me a pop up =  
saying:

"Wrapper cannot find Pultec-Pro mono/stereo. You may have removed =  
these

plugins. We suggest you replace them and blah blah blah..."

I have a clean UAD-1 4.4 install after having removed all the UAD =  
stuff. I cleaned out

the Wrapper too and started from scratch there. The worst part of all =  
this is

I always COE now. I can't even close a project without it crashing. =  
I can save thankfully.

Any more suggestions?

Tom

I tried the Neve 33609 comp/limiter on overheads. I hadn't read the =  
manual=20

so I missed some of the key features. I switched to a 1176 and got =  
better results.

Now that I have read the manual, I think the auto settings (program =  
dependent=20

attack/release times) might be the ticket. There is no attack time =  
control so that=20

really made it hard to use with overheads for me. The headroom switch =

combined=20

with the auto settings will be what I experiment with tomorrow. =20

I'm guessing it wouldn't be a well rounded Mastering comp either. Great =

for that colored sound though. I'll give it another go tomorrow on  
overheads and on a mix. I'm planning on learning it before I dis it.

At this stage I'd say the SSL 2 bus comp would be better for me I think.

Too bad I can't get that in software or can I?

>Hi to all.

Thats good news for us Parisians.

Matt Craig has contacted me about his reverb and some other goodies !!! and he told me some things that are only good news.

I will leave it up to him to decide when an what to announce.

Happy Paris to everyone.

Regards,

DimitriosTom, FWIW, I if I change a project from internal to word clock, I have to reboot every time.

Hard to imagine after 18 years of being a Mac guy.

What would a smokin' PC to run Paris on cost me to put together? Which Windows  
OS do you guys run? Is the learning curve as scary as I think it'll be?  
Am I totally crazy to be even thinking about this?

GanttOr, is there a chance that some very bright Mac programmer can create a VST wrapper to allow OS 10 plugins to function in OS 9?

lately i have been running back into Nuendo where i generally eq and compress the final stereo mix.

NOW... i am not squashing to death the final stereo mix, generally speaking.  
:-)

i only use a compressor set in dual mono... not stereo linking... as this gives me a noticeably increase in width.

i listened back to some mixes i did without this method. the final was either printed in paris, meaning actually bounced in paris. OR the paris master was sent via spdif back to Nuendo for a bounce... same thing i do now without eq and compression on the return input to Nuendo.

upon listening back to those mixes... i promptly wanted to throw up!!!

because they were so much bigger and wider than my current method. was it just those songs were better produced? has the most recent stuff i mixed just been lacking in attention to detail from the producer? or is it because of the freekin paris bus mojo magic enhancer thingy?

here is why i quit doing the paris bus bounce. i was tired of getting sawed off waveforms. thats it. is that ridiculous or what?

sawed off waveforms are bad right?

WTF?Christmas in September.....coooooooooool.....!!!

Its the freekin paris bus mojo magic enhancer thingy.

Well put

GeneRoom for an extra drive, or to replace the current one. 750 GB drives are an option now, and a RAID 5 NAS unit is probably a better idea then keeping everything locally anyway. The machine in question has two PCI slots and one PCI-E.

I'm 99% sure I'm going to do this, I'll keep people here posted.

The price will be 1799 !!! plus shipping.  
I test them for hours and hours and test several tubes for it.  
There will be also a version with a substitute tube which is THE SAME AS ef14 TUBE but has not the hype with all that literature with it.  
The sound is THE SAME.  
Nothing changes in the circuitry not even a small change anywhere, just this tube will be called Muse14 and will include a spare one with every mic, both NOS.  
This mic will sell for 1599.  
Regards,  
Dimitrios

ps: Don't get confused with Peluso U47 because he uses CHINESE capsules  
If you want a special Muse47 with a chinese capsule you can get one for 999.

you do this right?... print back to DP, or Logic, using eq and/or  
compression on the input return.

have you ever thrown up listening to the 'old way'?

jeremyHow about this one instead?

Yes, finally! Now that I can do it right with real drums  
(or "better", at least LOL).

Thanks for the compliments - I'm pretty happy with the way that  
one turned out - a few mix tweaks & maybe a drum edit or two &  
it should be there. Started working on replacing the e-drums on  
another tune last night - trying to work out the parts.

Yes I do this. My current mix config splits the digital output from Paris. One set goes through two channels of my Mytek D/A converters , then into my Mellennia NESEQ-2 then into a Portico 5043 then back into Mytek/Mac for recording the 2-track. The second pair goes direct 24bit SPDIF out of Paris into the Mac and records the 2-track mix simultaneously without the analog

No, this is a completely new book, listing all the equipment, how it was used, etc. Really an incredible effort. The form factor of the book is the size of a box of 2" multitrack tape, and it weighs about 12 pounds.

<http://www.recordingthebeatles.com/>A bit hard to find these days, and a bit "old school", but they are still out there.

Gigabyte K8NS Ultra 939. Works like a charm with XP and 4 EDS cards, and two dual-head Nvidia VGA's.

I Highly recommend it. No problems with IRQ's etc, just plug in all cards, and install XP. Easy.

One of the features of the Paris mix bus that is not in the manual is the fact that it is the only digital system that can induce euphoric vomiting. .

;o)

>OH YEAH!

The most stable Paris box I've had.

No need to massage Paris XP into working either. It just  
worked with, as I said, all cards in place, and installing XP,  
letting it's own IRQ assignment do its stuff.

Only using SP1, though. Haven't needed SP2.

Never used a Magma. I reckon you could probably even get 5 EDS's  
working, but I need 4 monitors, so one of the pci slots has a  
Nvidia Quadro in it.

>Greetings Everyone!

I know this is in reference to an "oldish" post, but I was wondering if many people downloaded these files. I did, but never got around to messing with a remix. Anyway, I was wondering what people's thoughts were on these tracks. I like Peter Gabriel, and always though his albums/CD's sounded great. I assumed the raw tracks would be "pristine", but soloing these tracks, you can hear all kinds of buzzing, hiss, and just a real noisy noise in general. I'm wondering if anyone else was surprised by this. I still think his stuff sounds great, it just threw me a little that the individual tracks would be

so noisy. Comments?

Tony

They are the original Quadros. (NVS 280 I think..)  
Would have to check. Got them some time ago on ebay for next to  
nothing. These are/were available in PCI and AGP.  
Yes, sluttage is good!  
Kim

An Antec true-power 350 watter. I pulled it from an Antec Sonata case that I bought for Paris, but the damn box wouldn't accomodate the full length EDS cards.

Passive cooling, too. Nice and quiet.

Also forgot to mention that Paris doesn't stop playing when moving windows across screens with these cards.

My pair of Matrox 450's used to. (that may have been a win98 issue though...)

>I cloned my system disk using Acronis and that part was smooth.

Actually, pretty straight forward. (I'm on XP pro Sp2).

I had to re-install my Unitor8 MkII (usb). Ok, no big deal even though the install process makes about as much sense as a monkey on crack. (Maybe I'm on crack and don't know it.)

Now the good part... clicking on the Paris Pro icon causes an immediate shutdown and re-boot. After re-boot, there's one of those microshaft error boxes saying the computer has recovered from a serious malfunction or whatever.

Before I go trying to do a complete re-install of Paris does anyone have a bit of advise on a possible alternative to a complete re-install? I'm using 1 MEC, 1 C-16, and 2 cards, Intel Mobo & CPU. This set up has been stable for years. Then again I don't do much heavy editing and tracking.

Thanks very much, JimNo-name 768mb. (not running dual-channel). I think one of them is A-data. As far as the video cards go, there are heaps on eBay, but make sure you get the right splitter cables for your needs. Kim

Maybe if you get time, you could just post the whole config on this computer that works so well with PARIS? I'm a Mac guy, but have been toying with building a PC for PARIS. Anyway, being a stupid Mac guy, I need all the details you can spare. It might also save you from having to give everyone your config, one post at a time. ;>)

..

Hey,

That gives me a idea for a cool band name!!

dbl'm looking for a simple DIY for a guitar wallhanger. Basically a 2x4  
about 4 feet long to hold maybe 6 or 8 guitars sideways. Any ideas?

Thanks

JohnDid you try starting the computer again.

I got one of those messages right out of the blue last week and next start  
up...nothing, no probs

John-

have you seen those stands with two cams that you place your guitar between?  
Gravity pulls the guitar down, and the cams clamp onto the neck. That's  
all there is to it. Works great.

I can't seem to immediately find a picture online (of course there's one  
somewhere...) but do you get the picture?

You could put the 2x4 up with a series of pairs of cams, each pair of which  
would grip a guitar neck. The spacing and the distance from the wall of the  
gripping pairs would depend on the guitars themselves.

-----=\_NextPart\_000\_03E5\_01C6E31E.4CD55050--I googled "RAID 5 NAS" ...still not sure what it is. I found some things that looked to be well over a \$1000 (thatsa no good), or other build it yourself things (thatsa not so good either).

I suppose 2 drives could be alright, although I'm using 3 now. One for the OS, one for audio, and one for sounds (Giga sounds, etc., plus I usually throw backups of songs on the 3rd drive).

Thanks very much, do keep us posted. I'm interested.

The Dell's drive is smaller but 7200, the HP is 5400, but that's the OS, so does that matter? The HP has no floppy drive. I guess no one uses those, but I think I need one occasionally.

Still, if you match up the Dell Ram-wise, etc., I think that is now somewhere near \$700, and the HP is just over \$500 (after rebates!).

Folder Options / View Tab / Apply to all folders.

If you want My computer to default to 2 pane view: Tools / Folder

Options / File Types / Folder / Advanced / set Explore as Default.

Enjoy,  
John

John-

I could make some out of some hard wood and a tablesaw/scrollsaw/nailfile or whatever. I think it would be nice to have them made of wood, actually. Just two circles mounted slightly off center would work. I could draw something up if you'd like... if I haven't made it sufficiently confusing...

John,

Saaaaahahahahahaaaaaweeeeeeeeeeet!

You have forever changed my life. Fewer bad words will come from my mouth regarding Mr. Gates from this moment on.

Thank a big Ewe!  
Tom

o with my system these days.

I can tell you that for my needs Logic and OSX have developed into  
impressive working tools. They've earned a spot here.

DP is nice, too.

Cheers,

-Jamie
