From what you have posted I don't see your budget and your needs meshing.  
The best advice I have seen so far, if you want a no compromise rig is to  
go PT HD3.

ROTFLMFAO!!!!!!

This is truly classic.

pab

(and not far from the truth, either....)There is only a 7 to 13% margin on them. Well that was some years ago, who knows now, I'm sure its not better.

Anyways, the two best deals are, educational discount, 10% off (sign up for under water basket weaving at the local college, cancel the class later).

Second way is to sign up for student ADC, A developer, it cost \$99.00 for a year, and you get a one time hardware discount of 20% off, there is no

better deal! With ADC you get all the ADC developer materials mailed to you, including the latest software. They have a major OS release once a year at a cost of \$129.00, with ADC they send it to you for free. You even get a free T-shirt. Anybody can become a student ADC member for \$99.00.

Who doesn't have an old PC laying around???

I don't think you need something fast for the Creamware DSP cards.

No, there is zero EQ on the kick & OH's, in fact. The kick tone is all multiband comp with the middle ducked down & the lows & high's brought up... Audix D-6 through a Chandler TG-2 & a multiband configured as mentioned, not a drop of EQ on it. The OH's on that one are B.L.U.E. Bluebirds through a Focusrite ISA 428, nothing on them at all, no dynamics, no EQ.

The snare definitely has some EQ on it - it's Matt Craig's

ADK

chrisl@adkproaudio.com <mailto:chrisl@adkproaudio.com>

www.adkproaudio.com <http://www.adkproaudio.com/>

(859) 635-5762fyi....by far the best sounding limiter to control the last stage of the master bus is Spectraphy: <http://www.crysonic.com/spectraphy.html>

Still best to control most of the gain at the track level, or as you guys are suggesting, groups, but for that last couple of dB, and for preventing clipping in a musical way, Spectraphy does a great job. I've tried more limiters than I can count and, even with minimal limiting, none maintain

musicality and smoothness of the mix the way this one does. ymmv, but it works great for my approach to mixing itb.

Regards,  
Dedric

>Hi James,  
Same as most any PC vendor has done for years. The walk in support is  
unique but mostly due to Apple using the store as a major source of  
sales and selling training and support. They do quite well with that  
model. I loved the first G5 models but the new Intel ones were

disappointing. I think it was a big mistake leaving PCI slots off the machine. I really think more PC users would be buying them if they had a couple. They use a Intel Xeon motherboard so there is no reason why they couldn't have. There is absolutely no performance loss from having 2 or 3 PCI slots on the machine. Same thing happened though on the G5 when they changed the PCI slots so they couldn't support older PCI cards. Everyone who wanted to switch had to wait for hardware people to release compatible cards or buy all new gear. Same thing is happening with the new Macs. This I think is keeping a lot of P

Q. In bowling, what's a perfect score?  
A Rose Marie: Ralph, the pin boy.

Q It is considered in bad taste to discuss two subjects at nudist camps. One is politics, what is the other?  
A Paul Lynde: Tape measures.

Q During a tornado, are you safer in the bedroom or in the closet?  
A Rose Marie: Unfortunately Peter, I'm always safe in the bedroom.

Q Can boys join the Camp Fire Girls?  
A Marty Allen: Only after lights out.

Q When you pat a dog on its head he will wag his tail. What will a goose do?  
A Paul Lynde: Make him bark?

Q If you were pregnant for two years, what would you give birth to?  
A Paul Lynde: Whatever it is, it would never be afraid of the dark.

Q According to Ann Landers, is there anything wrong with getting into the habit of kissing a lot of people?  
A Charley Weaver: It got me out of the army.

Q It is the most abused and neglected part of your body, what is it?

A Paul Lynde: Mine may be abused, but it certainly isn't neglected.

Q Back in the old days, when Great Grandpa put horseradish on his head, what was he trying to do?

A George Gobel: Get it in his mouth.

Q Who stays pregnant for a longer period of time, your wife or your elephant?

A Paul Lynde: Who told you about my elephant?

Q When a couple has a baby, who is responsible for its sex?

A Charley Weaver: I'll lend him the car, the rest is up to him.

Q Jackie Gleason recently revealed that he firmly believes in them and has actually seen them on at least two occasions. What are they?

A Charley Weaver: His feet.

Q According to Ann Landers, what are two things you should never do in bed?

A Paul Lynde: Point and laugh.sorry john but i drive a forester...no trunk...or clock.

r />  
reliable (on my humble system) ONLY by wrapping it with FXPansion 3.3 !!!  
I have posted all these before but is good to remind things.  
With my P4 2.6 I achieved 24 channels of wormholed audio tracks from second  
computer running Cubase and first computer running Paris.  
So why not use a SX or Nuendo or whatever shit out there to play your audio  
tracks with all VST/DX UAD Powercore, NUENDE, fOCUSRITE,etc and the wormhole  
back 24 (or more if you get yourself a faster than mine computer) to Paris  
for mixdown ?  
24 tracks are sufficient for groups and individual tracks.  
The audio tracks ARE PHASE ALLIGNED ONLY WHEN WRAPPED WITH FXPANSION 3.3  
,no Chainer no Spinaudio no FFX4 no other wrapper make it work ALLIGNED !!  
Try it.  
Regards,  
DimitriosHi guys

I've been following DJ's dilemma with interest as well as watching and  
playing with Reaper as it develops when lo and behold in the forum yesterday  
up pops the very scenario we've been discussing...

Granted this is all Reaper based but it looks like the developers are taking  
this second computer as an FX processor thing seriously. As to whether or

not it works in the real world is another story all together but at least they (the developers) are trying.

Here's the thread on the forum...as I said this is a brand new, still in beta testing and not ready for prime time feature but...

<http://www.cockos.com/forum/showthread.php?t=3273>

Don't use a much hated Americanism..., "I Hear Ya".  
I'm gonna try this shit myself. I have two athlon 64 boxes, one running ParisXP, one running SX3, linked via adat and a Frontier Dakota/Montana.

All I wanna do is run my drum submix (1 of 4... I have 4 EDS's) into a slammin' compressor, and still be able to tweak until the "final mix". (If ever there is one....)

don't even consider sending back an forth.

The only manageable way of doin it is having your "other" rig (cubase) as main daw andJUST send over wormhole to paris individual tracks and groups for eq'ing and mixing for that Paris sound whenxed from within.

Regards,

Dimitrios

>Hi, Chuck.

I've read your posts recently about who was responsible for the design of  
the various aspects of Paris.

I'm just wondering if there is someone out there (this includes your kind  
self),

that could give a little info about the EDS interconnects.

Specifically how the signals from a bunch of EDS's flow through  
those ribbon cables, and in what form, and where they finally get  
summed.

The way I look at it, if each card is responsible for it's own  
summing, and all cards' respective outputs are summed further  
up the chain, then it should, at least theoretically, be possible  
to break the chain somewhere, and hard-wire, (with the possible addition  
of some simple D-A A-D hardware), a hard-wired submix insert on any given  
EDS in the chain.

Perhaps a naive approach, but hey, I grew up with analog  
electronics. It was so logical back then...

(I have the schematic of a crystal radio haunting me every night)

And, This would solve soooo many issues.

Your thoughts??

Thanks.

KimThanks, Dimitrios.

Maybe what I'll do is just keep doing

what I've done in the past. Bouncedown only the Drums,  
(after automation of individual tracks), give them their own  
stereo pair, and apply whatever native processing I like.

I could always just slide them forward a bit, and even add back  
some of the original tracks for a bit of life.

I have done this in the past and it has worked well.

A bit of rooting around, but hey.. (to quote Ian Anderson.."Nothing Is Easy"!

I don't really relish the thought of going down DJ's road to  
HELLLLLL!!!! (apply Sam Kinison overtones here...)

>Dear Kim,  
Have you tried inserting on Paris Aux1 and Aux2 an eds compressor leaving comp on aux1 1:1 no threshold just for dry signal and aux2's eds compressor compressing/limiting heavily ?  
Thus you can buy adding aux1 control volume getting more rdy and by adding aux2 controlvolume getting more squashed.  
Remember to set aux1 and 2 to PRE and mute the corresponding drumtracks that are using these compressors.

Also you get make a native submix where you can use Dx ON AUXES Aand [ut your drumtracks there.  
All auxes there are mono but you can use two auxes with same compressor DX and pan hard left and right.

Hope these might help.  
Regards,  
Dimitrios

>(859) 635-5762 For me..I have solve my Nuendo mixing in the box issue by summing with an analog mixer..

Also, when working at my buddies studio tih his Yamaha DM2000, mixing Nuendo, Pro Tools is a joy..

yes, I agree with you all, you have to play it very safe to achieve good results in SX/Nuendo. But, I don;t like to work that way..

So, I sum using a mixer..AND I'm extreemly happy.!! :)

Even just summing 2 channel(master) I can mix in Nuendo like any other DAW and "Neil" <OIUOIU@OIU.com> wrote:

>Neill just began using Drumagog w/ Paris on a dual 1.25 GHz G4 (running OS 9, of course). I'm having some Drumagog problems. I could swear that when I first installed it I had access to all the free download 'gog' samples, but now I get a message saying 'Not a proper gog header' when I try to select

some of the folders. It's not consistent either. For example I can open the 'Rock Bass drum' folder, but not the 'Rock Snare' folder. On their website I read that you need at least v.4.05 to access the free stuff and w/ OS 9 I'm stuck in v.4.02, but why would some folders work and others not?

I've called and left a message for the Drumagog dude, who seems very cool, but I was just wondering if any Mac people are using Drumagog and may have some experience, strength and hope to share!

Thanks,

Honestly to me this sounds like you are used to a console's inherent EQing and narrowing of the image of individual channels that "allows" more space for the combination of tracks - I can hear this in the best mixes out there - individual tracks sound very narrow and "small" but when combined the mix sounds quite spacious and spread apart

---

s (one case in point was a Madonna track I once pulled up for reference, knowing it was mixed on an SSL from the liner notes - the vocal sounded pencil thin in the middle of the track). However, if you start with multiple spacious tracks (image and frequency response), they will walk all over one another. I even find mono tracks can sound wider on their own in a DAW than other formats, mostly due to better and more accurate frequency response (if well recorded with an LDC, transparent preamp and quality converters). Of course then you can always put a mediocre plugin EQ on it and remove all of that width and clarity in a heartbeat. ;-)

DAWs generally don't limit the bandwidth or sound stage of individual tracks, leaving it to the mixer to make everything fit. It isn't a problem, it's a lack of a limitation. One that many engineers learned to expect and utilize when working with consoles.

To be honest, the only problem I have with DAW mixing is having to narrow and dull down tracks to get them to sound like "other mixes". Obviously I'm not overly psyched about what has become standard expectation in the music world simply due to technical limitations of the past, now compounded by more modern technical advances attempting to recreate those limitations. It's a funny world. At least this is all about making music - you don't have to like or use native DAWs to make great music.

Regards,  
Dedric

> ganttWith all the comments about having to use older PC's with Paris, I just wanted to mention  
to those who maybe don't know  
that you can use a Magma Expansion chassis with Paris, and it should work fine with newer PC's  
with the correct bridge.  
PCIe to PCI etc..

I had a four card Paris system I used for over a year that was running solid in a magma with a Dell  
Laptop on the cardbus slot.

I'm thinking of trying this on my Macbook Pro running XP, in case my older PC goes south.

This should also work for Creamware Pulsar, but I have no experience with those cards.

Cheers,

TCIt runs fine on ME. there are Win 9X/ME drivers on their website.

;o)

Yes, Anti Pace, PC only.How do you know that is true? Are you putting an oscilloscope on the Submix masters ?

DJ wrote:

chance, send me an email.

James

excelsm@hotmail.com Find my post that explains it. I wasn't using an oscilloscope, just the source code for the mixer.

Behind the scenes, and without your knowledge, Paris is dipping the individual channels by 22 db. Then it applies 22 db makeup on the master. That's why you can push the individual channels so hard and make things 'gel'. This is what many analog consoles do.

you can't use a scope, because the signals I am talking about are inside the  
EDS.

I sent them a mail 10 days ago and still no response.

Are they usually that slow?

Their website says 7 days.

JSBack around 1962 I was taking lessons in oil painting at a studio in Texas which was run by a very stodgy old conventionalist harridan with no sense of humor (one of the only artists I've ever met like that). One of our assignments was to sketch out our favorite animal in charcoal and then paint it. When she reviewed the charcoal sketch, she was sort of distracted and shined it on. I don't think she understood what she was looking at....so I went ahead and finished it. When she saw the full blown Rat Fink, she almost had a kitty cat. My days were numbered after that. I used to love cartooning and got pretty good at it....and I always wanted to build one of those Big Daddy Roth chariots (a for real one) but the closest I ever got was a Triumph TR4 modded with a 289 and a Borg Warner 4 speed. .

Click on a folder/title, and it does not open??? I'd like to view the content, and easily save the files.

I don't know if it ever did that but the folder contents are showing up in the right frame

I'm not sure what's up. In Safari there are no frames, I may have them turned off somehow. I can right click and open them Tabbed or in a new window. I cant down load the tree pad file. With Mozilla/ Firefox the the frames show but when I try to down load the Tree Pad file it says the file is missing.

I think it's a bad link to the Tree Pad file???
