---=_linux48d65da2--All I can say is that whether the last fix was a "true" fix or not, I just had to close REAPER for the first time in about 36 hours straight, and that was only so I could add the new PSCL and restart. PARIS ASIO is usably stable for me now, after 36 hours of being open without crashing or rebooting, with a moderate test mix in progress

So if that kind of "not fixed" was as good as it ever got, it would have been fixed enough for me - I wish I could say I'd solved my own (unrelated to audio) software headaches so solidly.

But I understand wanting to be sure you've treated the disease and not the symptom, and I suspect that if this nails it you'll be able to start shortening those lengthened internal timings again and speeding everything up. I'll let you know how this works over here - keep up the superb work!

- K

In the latest build, I reset the delays to zero. So, it should be faster.

Cheers!

Mike

Just concerned with relative levels, panning and any freq "gotcha's" at this point. Production decisions as to whether or not to keep/lose all or part of the slide track, etc. will come later.

Thanks,Arrrggggg.....I posted a link to the wrong file....as if I could tell the difference right now....

Twat did you say? I cunt hear you, I have a ear infucktion, bare ass me again.Mike,

Hopefully I'll be able to do more testing next week. Been working to expand the system into a different magma case and so far cannot seem to get beyond 4 eds cards before it crashes and the system restarts on its own. Once I get to stable, I should be of some use in the testing process. Makes me want to take it back to where it was. In the old case I had six cards rock solid and was seeing all the ADAT cards. I just got greedy :-)

>Hey Kerry,

Speaking of Reaper - I just tried turning on a couple of UAD-1 plugins in
Reaper and there are no cool pictures of the boxes they emulate! Only a
generic parameter list. Is that different on PC?

By the way - as soon as I get time I'm going to call to tell you about the
Alberta seminar we went to. I'm in the midst of a massive work weekend.
Be careful what you pray for!

Hi Jeff,

I'm sorry to hear that. If you want to use to use the latest PSCL I posted
along with DebugView (attached), I could look at the output to see if it
is a driver issue.

Good luck!

Mike
