johnJohn,

I'm sure the 212 has a huge sound. Although the 112 is rated at 200w it may be the speaker that breaks up a bit with the low strings at stage volume.

After all it is a single 12" doing the job.

I've been in band mode for a while so I haven't been around much lately.

I just wanted to drop in and let you know if you are thinking of any new gear purchases check out my man Drew Townson's new set up:

<http://www.analogplanet.com/>

I've known Drew for many years and he's always done me right. He used to work for Merc and PAD. Now he's gone out on his own. He's got A designs, Wunder, Coles stuff like that, not everything yet, but more seems to be coming in.

Tell him I sent you!

I'll see you all when I get back to recording.Hi all,

Been out humping a couple of new systems into place, so I haven't been around much.

Got a new 8-core Mac Pro shipping. The pore ole Mini here has had about enough of me and how hard I work it...

Anyway, I have discovered that the way to buy Apple computers is to get your own RAM. (I use Crucial) and your own monitor. (not the terrific but silly-expensive Apple ones). I got 6G of RAM for half the price of 4G from Apple. Crazy... and a 24" Sceptre DVI monitor for 299.

Macs are almost affordable if you pay attention to the details...

The 8-core with all that RAM and a couple of good drives will serve me well if I have to leave PARIS, but I will resist as long as I can.

HEY! Where's our update!

I know... coming soon...

Also, for buying the Mac I got a free iPod Touch for my wife. Pretty impressive I must say with built in WiFi.

Kind of an iPhone w/o the phone. It also plays my full uncompressed wav files just like my Classic and sounds fab. Very cool little box.

Hope everything is well with you all.

DCGot the edu deal, eh? You still teaching or did you just enroll in college finally. ;^)

The 8 core is a monster. You'll like it.

I have had good luck with Crucial also for the last few years. Dell has been OK for monitors.

Still holding out for the next multi-core release before I replace the G5. But the new 17" MacBook Pro has been pretty sweet. BTW, I recommend Chris from this group over at ADK, they are Apple dealers.

Cheers,  
-Jamie

To get the best memory speed when you have more than 2 sticks of ram you need to even sized  
and even numbered sticks in both bank A and bank B.

Probably won't notice the difference with most applications. Just heavy video and audio stuff will  
see a benefit.

This holds true for current PC Xeon boards also. Not like they are any different now anyways.

Also make sure you Crucial ram has the large heat spreaders like on the Apple ram. If not you  
may start to have overheating issues.

I just setup a system for a video guy and he is using that new Samsung Syncmaster 305T 30  
LCD.

The quality jump over the 30" Apple display was drastic and its like \$500 less. ha

Yes. I heard about that. I have 2 matched sticks, 2G each.

Crucial has a box talking about these issues.

Does it matter where they are? It comes with 2G from apple  
and they are in the first 2 slots. Is it OK to put the new  
ones in 3&4 or should they be in 1 and 2 and the oem  
in 3 and 4?

>Probably won't notice the difference with most applications. Just heavy  
video and audio

And we may go there sooner than I would like!

They do indeed.

Now, I am getting ticked off about the monitor situation...

The Sceptre I bought does not work with the Mini.

Using DVI, it will not maintain the image. It just blinks on and off and never stabilizes. So, I go to VGA and set the rez to native 1920x1200 and 60hz and it works fine but looks lousy. I go back to the DVI input (disconnected the VGA) and no dice.

Sooo I call up Sceptre and they dunno why it does that, and don't care. "Mac's are not supported"

So back to Costco it goes... and I am almost ready to buy an Apple monitor... grrrrrrrr

I liked what you said about the Samsung and I like their stuff so I got them on the phone.

"Should work, no promises, Macs are not supported"

Well, we know the one you installed worked, but they will not tell me that any others will...

So, I found one at Newegg by Planar.

[http://www.planar.com/products/flatpanel\\_monitors/px\\_flatpanel/px2411w.cfm](http://www.planar.com/products/flatpanel_monitors/px_flatpanel/px2411w.cfm)

It's 499.00 at Newegg.

I got Planar on the horn and yes, Macs are supported and the guy was super helpful. He says it looks better than the Apple monitor.

Seen them?

thanks for all the help.

>www.adkproaudio.com  
>chrisl@adkproaudio.comHi all,

I bought a Paris system (Mac) when they first came out and used it quite a bit. But it's been a few years now since I've used it and I recently dusted it off and hooked it up again for small projects for myself.

I'm remembering or re-reading about most of the functions except I'm having trouble with the mix down procedures.

So, when I mix down a few tracks to stereo I hit that "D" button on the main mixer right? Then I have those two tracks I can drag around. There's something about the Global or Submix here that I don't quite remember.

I have some old Waves processing I used to use. I used to then take that mix and run Waves processing on it. I think I used to drag it back into the Editor and use two tracks on the main mixer and do a stereo process. I believe I had to click the stereo button on the Waves and the two tracks, side by side, would then be processed in stereo (for maximizing or eq or etc.) It didn't seem to work the other night though so I'm not sure.

I used Sonicworx to then import the files to then burn a CD. There were some particular settings to be used (aiff, wav or ?) and the bit rate I believe (44100, etc.).

Sorry about the length of this post. I would appreciate any assistance from anybody who can tell me what the hell I used to do!!!

I always liked Paris and I'm amazed at how cheap the stuff is selling for now.

Thanks a bunch,  
Mikel wondered where Drew went. Tell him Aaron from the previous AIB camp said  
hey.
