May have to build one now. can I use this with my single cpu, to get the
adat modules happy?

You bet! It will leave a bunch of log files in your c drive that I'm using to debug. Just delete them once in a while. As soon as I figure it's done, I'll remove the code that makes them and release an update.

All the best!

Mike

>Need the following:

A 22" widescreen LCD that does 1920 x 1600 resolution...does one even exist?
Has to have DVI inputs.

A KVM that will switch two DVI montor signals (actually I only need to switch between monitors.

A long range wireless keyboard/mouse....at least 25'. Needs to have a narrow front-to-back profile if possible.

A 25'-30" DVI cable to run from the KVM to a tracking room.HI Deej,

www.adkproaudio.com

chrisl@adkproaudio.com Great example - thanks for sharing... I have 2 Paris Systems a Protools system

and a Cubase system (how is that for being all over the place) - the Paris gets the most use. I just always feel the need to say, yep I have protools

or no one seems to listen - then I say check out this "vintage system" that sounds like tape.... I just make sure I have the PC booted with Paris already as I run it on 98 and as soon as they see that I have more explaining :-)

Kerry Galloway <kg@kerrygalloway.com> wrote:

I thought I'd post this so that anyone trying it would have the latest/greatest.

I'm still having the PARIS app lock up occasionally when it starts. I've been searching and searching for the problem, and I've got a new idea to

try. Once PARIS is running, I haven't had any problems at all.

Anyway, I'll be away for a few days, so this is it for the weekend.

All the best!

Mike

PS _ the ADAT driver is modified here, too. Should be better.

Well, for what you and Chris are trying to get me to spend I could buy a bunch of laptops, spread them all over the studio, use Remote PC over wireless LAN to link them to the main DAW and let every performer dial in their own cue mix.....or if I was using Logic or PT, I could just use this.....
<http://www.folabs.com/proremote.html>
;)You monster. Have a great vacation (if that's what you're taking). Maybe I'll have this on a PC to check out by the time you return.

Me too Aaron. Thanks Mike for all your work..... trying to support you will all the gusto I can muster. Have a good vacation, you deserve it.

>Hey, guys thought you might like to listen to some stuff I've been uploading to TAXI lately for Film, TV, Video, etc... categories. Had a few pieces forwarded, been using GigaStudio, the Synthophone, some older synth modules and Paris for much of this. Some of this is older, one track that Aaron ported over from Session8 several years back, "Swept". I finally got around to mixing it, with some steel drums that I banged out. (Thanks Aaron!) I'm even part of the vocal chorus on it. There's a variety of material here, "You Just Left", from my 1st album. "Pieces of a Journey" is a hybrid thing, orchestral, Asian, African, etc... "Mount Olympus" is a piece I submitted for the 2008 Olympics, Jason Miles' Psychic Horns used on it. "Soundtrack Dreams" is another hybrid Film, TV piece. "Makin' Salsa" is an old Latin big band thing I wrote a long time ago, dragged it out and soloed on it with the synthophone. D&B1 and D&B2 are some Drum and Bass stuff that I was messing around with. Any feedback appreciated.

<http://www.taxi.com/richlamanna>

RichI don't normally have problems with Flash, but nothing at the TAXI link will play for me - is it only members that can hear it, or a configuration issue at my end, or is there something wrong with the files? I get nada for sound

while the audio files are playing.

But I went to your website from the link and really enjoyed the music there. Cool version of Giant Steps, you sound great! Othello's on fire on the steel drums (wow, playing Giant Steps on pans - that must have looked like an octopus on speed). Nice work!

- Kerry

On 8/10/08 7:26 AM, in article 489eeb55@linux, "Rich Lamanna" <richard.lamanna@verizon.net> wrote:

> yearsKerry, not sure what's wrong with the TAXI link. Anyone else having this same problem? You should be able to listen to them according to the parameters which I set on the site. The files play for me fine, but I am a member. Thanks for the complements. I've forgotten which files are on my website. If it's the live recording at the Van Dyck, the audio is kind of crappy. I've got to put up some audio from the original cd, much better recordings and Othello is playing even more like the octopus on speed "-)

De hip bone Schenectady de thigh bone, de thigh bone . . .

Sorry, couldn't help it. Anyway, very nice saxing, very cool composition. I love the odd meters, especially the 9 groove in D&B1. Minor

criticisms . . . some of the samples sound a little synthy for my tastes, and overall the mixes seem pretty dry, could use some "space." But that's just technical stuff and a matter of taste. Musically, it's great. :)

> Hayes, Award-Winning Soul Legend, 'South Park' Star, Dies at 65

By Michael Tsang and Joseph Galante
[Enlarge Image/Details](#)

Aug. 11 (Bloomberg) -- Soul legend Isaac Hayes, who won Grammy and Academy awards for the theme to the 1971 film "Shaft" and voiced the character "Chef" in the hit comedy series "South Park," died yesterday in Memphis, Tennessee. He was 65.

Family members found Hayes lying unconscious next to a running treadmill in his basement around 1 p.m. local time, said Steve Shular, a spokesman for the Shelby County Sheriff's Office in a telephone interview. Hayes was pronounced dead at Baptist East Hospital. No autopsy is planned,

Shular said.

Hayes, who co-wrote ``Soul Man" and ``You Don't Know Like I Know," won an Oscar for best musical score for ``Shaft," according to his Web site. The song and the movie score also won Grammy awards for best original score and movie theme. Hayes, whose work influenced disco, urban-contemporary music and rap, was inducted into the Rock & Roll Hall of Fame in 2002.

``He has been hugely influential on the rap movement as both a spoken-word pioneer and larger-than-life persona who's influenced everyone from Barry White to Puff Daddy," a statement from the Hall of Fame's Web site said.

In the 1990s, Hayes found a second career as the voice of Chef, the cafeteria cook and self-professed ladies man who became a mentor to the students of the ``South Park" animated series on Viacom Inc.'s Comedy Central.

`Perfect Alter Ego'

The character was ``the perfect alter ego for Hayes," said his Web site.

He left the series in 2006 after the show lampooned his religion, the Church of Scientology, CNN said.

Hayes, who became known for his shaved head, dark glasses and fur coats, was born to a sharecropper's family in Covington, Tennessee, on Aug. 20, 1942, according to his Web site. He was orphaned in infancy and was raised by his maternal grandparents.

He played saxophone and piano in high school and performed in ``doo-wop" and jazz bands. Hayes turned down seven college scholarships for music, and instead landed a job playing piano with saxophonist Floyd Newman's band in West Arkansas.

Newman was a staff musician at Memphis's Stax Records recording studio and Hayes eventually found work there playing keyboards. His first paid sessions were with Otis Redding in early 1964. Hayes wrote some 200 songs at Stax with David Porter, including ``Hold On, I'm Coming," ``You Don't Know Like I Know," ``When Something Is Wrong With My Baby," and the R&B Grammy award-winning ``Soul Man" for Sam & Dave.

His 1969 solo album, ``Hot Buttered Soul," was No. 1 on the Billboard R&B chart for 10 weeks and stayed on the pop chart for 81 weeks, according to his Web site.

The album established Hayes's stardom and set out his trademark style of

taking pop songs and stretching them out. ``By the Time I Get to Phoenix" was originally a hit single written by Jimmy Webb and made famous by Glen Campbell in 1967. Hayes's version ran to almost 19 minutes, with an eight-minute spoken introduction.

Hayes also performed in more than three dozen films, including ``I'm Gonna 'Git You, Sucka" (1988) and ``Guilty as Charged" (1991), as well as TV series such as ``Miami Vice," ``The A-Team" and ``The Fresh Prince of Bel-Air."Hi DeeJ,

Laptops with remote desktop are a fine options IMHO. Just don't go for the wireless setup. It will interfere with the audio stuff more.

ADK Pro Audio

(859) 635-5762

www.adkproaudio.com

chrisl@adkproaudio.com Since some of us have not been following all of Mike's updates, can someone

summarize what's been done and what is going on? I see this thread about PSCL and ADAT and I tried weeding back days but I am making no sense of the posts and comments.

What does this do and how does it work? I asked this question in the thread and got zero replies. Geez, after weeding through days and many non-Paris threads, you would think some of you are eager to write something Paris related...

Reminds me of days asking Edmund a question and getting deaf ears until one of his favorites asks the same question... then he replies. Hey Ed,

I haven't tried it yet but Mike's PSCL is an update to Paris 3.0 with XP. Most of us have had great difficulty getting more than one adat module to show up in a single MEC. This update is supposed to alleviate that problem. It doesn't sound like it will help you if you don't use adat modules. Another thread mentions the possibility of changing a chip in the ADAT module to increase it to 24 bit. These two updates will be a big plus for those of us still using Paris.

Hey, Ed!

I never meant to make you feel like you're not a favourite!

I released a version of the ADAT driver that allows the adat card to work with ADAT machines under windows XP. Basically, all you have to do is got to:

C:\WINDOWS\system32\Ensoniq\PlugIns\MEC\Driver

and back up your adat.dll file and replace it with the new one. I've attached to file to this post.

I've since been working on correcting the threadsafe issues in the Paris Studio Control Library, which is part of the driver. The original XP release of this software doesn't work properly when used on a multiprocessor or multithreaded PC. I've got the C16 issues worked out, and I think I still have to fix something with the "card uart". It is used to set the clock sources on startup, as well as audio transfers between the card and an IF2, and it is currently not threadsafe.

About 75% of the time, paris now works perfectly for me on a multi cpu machine. The other 25% is freezes when it starts up. I hope to fix that any day now.

Anyway, that's the latest.

Cheers!

Mike

---=_linux48a0b236--Man this is just too young, we're stripped again of yet another legendary musician. The cat was fantastic, playing with a whole host of great musicians. I'll miss him. He died a few weeks ago, but thought I'd mention it, especially for all of you guitarists out there.

http://jazztimes.com/columns_and_features/news/detail.cfm?article=11513

RichHi nurse Sarah, just like a nurse. Wish I thought of that one, you're pretty clever. About the reverb, I tend to hear less effects for the most part because too much tends to detract from the recording, (muddles things up), but I understand what you're saying and appreciate the constructive criticism. Right, some of those synths are a bit dusty "-) I need to go to recording and engineering school.

Rich

him very overweight, the earlier ones he looks very fit. Did weight have
anything to do with his death? Another great loss for sure.

JohnSucks. He was a unique player.

I am told you are in the Denver area. Would you please email me if you have
time for a little paris show and tell.

Thanks Man,
ronHi guys,

I put some locks on the card UART, so the IF2s should now work properly,
if they ever didn't.

I also changed a static buffer to a regular buffer because it was shared

among many purposes, and it looked like they could trip on each other. This is a multi-part message in MIME format.

---=_linux48a24f1b
Content-Type: text/plain
Content-Transfer-Encoding: 7bit

Hi guys,

I put some locks on the card UART, so the IF2s should now work properly, if they ever didn't.

I also changed a static buffer to a regular buffer because it was shared among many purposes, and it looked like they could trip on each other.

I think I just accidentally posted early....oops!

I also increased a ridiculously short timeout in the init code, and I haven't had a freeze on startup in about 12 tries. Lets hope that's it.

Anyway, here it is. More to come when I can.

All the best,

Mike

About a month ago, Verizon decided to jump on the "Save the Children!!!!" bandwagon and killed most of the usenet groups on their news server, using as an excuse the old "well, there have been examples of child porn on there".....

Yeah, right. If you're going to use that excuse, why carry the internet at all, you idiots???

Oh, and they're also jumping on the "We have to stop piracy!!!" bandwagon as well.

They've eliminated all but what's referred to as "The Big 8" hierarchies, which means that all of the alt groups are gone, along with a bunch of the other groups.

Roughly 90% of what I read. That means that I can no longer access alt.audio.pro.live.sound. Yeah, that's saving the children.

I'm willing to lay odds that Verizon won't reimburse me the \$25 a month I would have to pay a premium news service like Giganews to get back the access I originally signed up for...

Bastards. Cowardly, greedy, stupid bastards. They're just using the "rallying cries" as an excuse to cover up the fact that they're jumping on the chance to cut the amount of servers they need to use and the amount of bandwidth they have to supply.

And it's not just Verizon. I've been reading that the NY attorney general has scared a lot of ISP's into killing usenet.

Just like the TSA and Homeland Security. "Fight the War on Global Terrorism!!!" So, we have to strip naked and can't carry anything larger than a shot glass full of shampoo when we go through the airport. And they have the legal right to seize your laptop, cell phone, cameras, camcorders, pda's, whatever can store data -- without any real reason, just because they don't like you. And they can take that stuff to an undisclosed location, hold it indefinitely, and you can't do anything about getting it back. They just keep coming up with more ways to make it impossible for us to travel or go anywhere, all in the name of "Fighting Terrorism!!!"

I'm really starting to hate the world.

pabWhen I was running keyboards for Chick Corea a couple years ago we used a couple Mac laptops running Logic and synths in addition to the midied Rhodes, Motif, and some other rack synths and of course the midied Yamaha grand. I had a project for each song and I would switch from one Mac to the other between songs so I never had to worry about loading time. I did not use battery backup and never had a glitch, but these were all large clubs or small to medium concert venues with perfectly good power available.

I did end up taking a UPS to the Red Rocks show. There was a
thunderstorm that delayed the show about an hour, so it was good to have
that extra protection...

The show went great! Laptop worked well. B4 II, Pro-53, Massive, EXS24,
EVD6, GPO, etc. My violin also did great with the Zeta bridge. It all
sounded really good bouncing around the rocks. :^)

Cheers,
-Jamie

>Thanks Tom.. appreciate you taking the time to respond... Although I don't have an ADAT card, it might be something I have considered since I like the idea of multiple channels in a lightpipe...

That said... I use to have an ADAT card in my system because I had an older ADAT sitting around. I never used it and finally sold the card... but I was able to recognize the card and was able to place connections on the card's input and output... again, I never hooked up the ADAT to test it...

>Thanks for responding Mike. I wasn't aware that the older XP drivers didn't work for the ADAT... and I had an ADAT card, but never tested it... although I could see it in Paris and make connections... so it sounds like this is more directed at the multi-processor environment.

Thanks again for explaining... I kinda felt like something was going on.. and I wasn't sure exactly what it was. And it sounds like you are working on multiple things with Paris. That's awesome! I was almost sure Paris was gonna die since the SkunkWorks stopped...

May I ask... are the source code for Paris in 'C'? I think I remember seeing someone say that a while back. I am an older C programmer (learn it on the side). If it is C, when you compile, do you a special library? Sorry if I getting too technical and don't want to reveal secrets... and I never programmed audio stuff before... but it interest's me to know how Paris is compiled...

Thanks.... ~ Ed

>OK, Paul, take a deep breath. Another. Another. OK, wait, don't pass out.

Now, right a letter to the CEO of Verizon and tell him/her exactly why
you are leaving their previously satisfactory service. Then find another
ISP.

Start loving the world.

pop through the TSA lines at the airport, you can still get through with a
santa-sized bag of electronic circuits of completely unknown origin and
functionality and then board any commercial aircraft you'd like... without
question.... just be sure to turn them all off during take-off and landing.

backups. One aspect is image backup with Seagate DiskImage. Anyone had
any experience with this free utility? It seems great. I just want to
know if I can count on it.

I own Ghost, but find it a difficult and less than elegant solution,
plus it does not work on my current computer for some reason. Also, I
don't much like Norton/Symantec - ugh. HI Bill,

Not sure if I would use a backup utility that only works for one brand of drive.

Symantec has really gotten pretty bad with their current versions of Ghost.

Most everyone that has gotten over the program we recommend to use with current hardware has had trouble with it during the recovery process.'

The current consumer oriented version of Ghost is way stripped down to the point that it is useless in an emergency IMHO.

If you want to use something that has better support for computer hardware and more reliable I would recommend the following.

Paragon Drive Backup Personal 9.0

<http://www.paragon-software.com/home/db-personal/>

or

Paragon Drive backup Professional 9.0

<http://www.paragon-software.com/home/db-professional/>

Professional would future proof you more in that it has both Linux based recover CDs and Windows PE based CDs available.

The windows based one will let you install driver controller an network controller drivers so doesn't really matter what the hardware is.

It also support recover of both hardware and dynamic raids. If you never use raid or don't change hardware allot the personal will be fine also.

Aconis True Image Home 11 is also pretty good. But they are allot slower and less responsive at updating drive controller chip sets.

Both are simple to us I think. paragon does allow you to get deep under the hood though if needed.

Both have scheduling support and both have the options to just backup and can even exclude files from a backup if needed.

Paragon also has a new express version that might be worth checking out also.

<http://www.paragon-software.com/home/db-express/index.html>

They also have some really cool Mac stuff going on now too.

Chris

Chris Ludwig

ADK Pro Audio

(859) 635-5762

www.adkproaudio.com

chrisl@adkproaudio.com I just discovered that on the XP disc is the Windows utility "Backups". This looks very comprehensive, allowing both disc image and scheduled incremental backups. I think I will just use that if it works as I hope it will.

>OK so my head hurts as I am been trying to figure this out. I am sure I am
missing something simple.

Details:

Newly running 3.0 on 98 machine

1 MEC

2 EDS cards

1 8 out card

1 8 in card

Trying to patch to second EDS card mixer:

Mec master A to mixer A (8 ins to mixer A 16 ins) working fine.

No option for second EDS card in object list window. Tried going to mixer

What am I doing wrong?

Thanks in advanceHi Ron,

Ya that's right. You can't patch across submixes.
You can make hardware connections if you have two
Mecs or a 442.

What are you trying to do? If it's just record onto the
second submix then you should switch the cards in the Global Master.
Switch card A to Submix B. That'll assign all your hardware to
Submix B. I'm not sure how you'll hear your master audio though???
I've always had multiple Mecs and left one as the Master A and swapped
the second one around to different submixes this way.

If there's another reason for your patching question please post it.

Good luck,
Tom

It is usable, but NOT fast to make recovery data from. Last time I used it though may have been pre SP1 so things could have well changed with the updates since then. That said, I didn't find it quick or intuitive, and for a client that insisted on using it, not reliable on the scheduling overall.

I have an extra MEC would it be a good idea to use it or just stay the way
I am with one. What are the advantages?

Back to the other question. I see it in the Globle Master - what should I
set sub mix 1 to Virtual, or Native?

Thanks man!

To answer your question:

I usually have to switch it to virtual first and then assign the cards (Mecs attached to them) as I want them. In your case with only one mec you may have to drag tracks around to hear what is on submix A through Submix B or vice versa. You need hardware attached to Card and Submix A to hear your 2 bus mix.

In rethinking this I would leave your card assignments as they are. Drag the tracks from A to card B and continue recording to Submix card A. If you had two Mecs then you wouldn't have to do that. Make sure they're all time locked before dragging.
All audio from both A & B will be heard and mixed together this way.

>Tom - You Rock !! Been stumped for days. Today is a good day

So now I am very curious about using two MECS. Lets say I hook up the second one. Do I tie the 2nd EDS card to the 2nd MEC using the EDS cable? DO I keep the EDS cards connected to each other the same way they are now 10 pin and 16 pin cables attached? How will my patch bay settings change? Is there a tutorial or ref on setting them up?

Sorry for so many questions, but I am getting excited about this :-)

```

Anyway, I need some advice regarding configuration settings for running Paris 3.0 (single card) on an Apple G4 Ethernet dual processor running OS 9.2. (And please forgive me for sounding ignorant because I am.)

To work around it, I just cleared the Undo buffer within the project and kept working.

Today I decided to try to optimize my settings. I referred to an old user group posting that recommended the following and made these changes.

	BEFORE	AFTER
Disk I/O	64	128
Disk Cache	10	80*
Overview Cache	2048	4000
Manual Punch	Short	Long

The Paris manual says that Minimum and Preferred Memory Settings for Paris be increased by 1200k for every MB that the Disk Cache is increased. Since I had increased the Disk Cache from 10 to 80MB (an increase of 70MB) that meant $1200k \times 70 = 84000k$. But rather than adding that to my previous minimum and preferred settings of 62998, I added it to the recommended minimum and preferred settings of 5098 and ended up at 89098 for both minimum and preferred, i.e.

	BEFORE	AFTER
Minimum	62988	89098
Preferred	62988	89098

either.

open.

Does anyone know what I should try next? Is there a way to get into the Paris configuration settings when Paris is not opening?

Many thanks,
RichardRon,

You are correct with all your connections.
You will need a word clock cable to attach from mec A
word clock out to Mec B word clock in . Your existing patchbays
will still work but you may add a few things with the new hardware.

You will have the 20 bit master section of your second mec to add
connections in your Paris patchbay after mec B shows up. You can
always add cards to that one too for 24 bit recording/inserts. The spdif
is always there for 24 bit data too.

I'm glad you're pumped! Make sure power is off and your eds cables are
in working order. I smoked three mecs with a bad cable.

>This is Richard with additional info: Just read this in the Paris manual:

file will most likely need to be replaced if you do this.)

So perhaps this means that my real question is, "How do you replace the .cfg file?" There's nothing in the manual about it.

I also have this old post that says, "If you are not able to open PARIS and need to change the Configuration settings to get Paris to work, use BBEdit Lite (available on the net for free) to open the PARIS.cfg file. Make a backup of the PARIS.cfg file before you open it. You can change all these settings in there, and they're clearly labeled and you don't have to start up PARIS to change the settings. Just keep the original text and change the numbers, save the file and start up PARIS." However, I can't find a free download of BBEdit Lite 4.6 on the Internet, perhaps because it's so old now. So another question: Does anyone have a copy of BBEdit Lite 4.6 that they could send me?

Sounds like a plan I will connect 2nd MEC tonight to the second EDS card
and be prepared to rock. Why type of cable is a "word clock cable" Kind of
looks like an oscilloscope connector. WHere do you find one of these?

another few seconds at google. It's not that hard, really... but I don't own a mac so I'm not doing the research for it to be honest :)

___Setup / XP Setup

and also paris.cfg

EnjoyThanks for the data nad link Aaron. I found the wizard and GUI fairly simple and workable. I think I'll proly stick with it as it's free and works.

>Hey all,

Any opinions on this chipset?:

NEC / Lucent PCI to Firewire IEEE1394.A controller chip

This would be used for a Presonus Firestudio.

Thanks,

David.It's true! I've done it. While I was working on a TSA project a few years back, I went through security with a bag containing a black box (literally) with one red switch on it, eight optical cables coming out of it and eight optical motion sensors on the ends. We called it the octopus.

When they asked me what it was, I told them it was a prototype sensor system for integration with an EDS machine. When they asked me what an EDS machine

is, I told them "the thing that just scanned my luggage and found the thing you are holding!!!!"

>Shoot! That leaves me out... I never educated myself to cross the plus-plus
territory and stuck with the plain-jane 'C'.

But that is interesting that there is no special library... But how do you
know how to call things or turn them on in the EDS? Sorry if I am getting
too technical... I am really puzzled... I am aware of C++, but to call things
up like `_win_call(parameter,of,any,kind);` I am not sure I understand how
you know what to program since the EDS is proprietary hardware. Or is it
using strictly simple audio library calls built in the C++ 4.2?

My only suggestion is when going between projects give yourself about 15 seconds after closing one and opening another...that seemed to stop a lot of those error messages...has to do with memory allocation I believe (as if I know anything about computers)

Of course, at the rate Mike Audet is killing bugs, we may have to tweak that section pretty soon.

Wouldn't it be cool if someone made a system like this.

128 tracks of I/O @48k 64 tracks @96k up to 2 cards can be used in the system at once.

Optical Madi based with word clock i/o

128 high quality comps and eq based on famous studio consoles available in hardware usable on Inputs or outputs or both.

At least 1 Hardware effect on each track so you can use 128 hardware effects at once. No latency ala Paris and PT.

Be able to use native effects in the hardwares mixer application at the same time as the hardware effects.

Be able to use the hardwares Mixer application as an editor, recorder, mixer even at the same time you use another audio program.

You will be able to do real time bounces of Cubase's or any other native applications outputs with the other application.

For under \$3000

I beat some one at AES will be announcing this.

NEC/Lucent chips tend to have the most compatibility issues.
Lucent is also known as Agere which I'm sure a few Mac people are familiar with having to deal with lately.

TI or VIA are gonna be your best chances at compatibility.

Also the Firestudio has it's own set of compatibility issues added to that.
They use the TC Dice 2 chip for their FW I/O and it has had problems with everything.

Using the TI FW chip will be the give your best chance at compatibility.

Not sure yet how that are handling that yet. If it is similar to the Sound scape system then they will only be addressable in the hardware mixer.

But sense the all the plug ins are the Duende plug ins I don't think it will be that big a deal hardware mixing software has midi control so there will probably be some way to write automation.

Going back and

> forth between them might be a pain.

While tracking I don't think many people will be doing tons of automation.

If using the Cubase/Nuendo 3/4 you can use the effect as external effect buses so they can be used as plug ins and have all the PDC stuff handled.

From the look of it they will be shipping not to long after they announce it at AES.

Nah not as unnecessarily complicated as Creamware. This is geared more to audio guys more than synth sound design folks.
Heck there aren't even any MIDI ports on the SSL product.

Creamware's big innovation was almost 10 years ago now. Not much has really changed or progressed sense then.
They seem to have used all their best ideas up all at once. Maybe Sonic core will help revive them but I have my doubts.

ADK Pro Audio
(859) 635-5762
www.adkproaudio.com

chrisl@adkproaudio.com I actually would have guessed Yamaha save that Cubase/Nuendo integration.

Two concerns for me. First, SSL has yet to get into my sandbox because of stability concerns. I hear LOTS of problems from people using their firewire box. Second, maybe I'm getting old but I'm just sick of all of the hassles dealing with multiple apps/machines. In the business software world where I'm getting closer and closer to the developers good programmers are deeply concerned with 'workflow.' Why? Because good workflow means more work gets done. I spend huge amounts of time being sure my users have standard, familiar ways to work with in house software, so if they learn one app they know the rest.

So, for me, who has far less time than I'd like to record/mix/play, anything I use MUST work INSIDE SX and Live pretty much seamlessly. I'm even thinking of ditching my CW card, which I really flaming love, but those John Bowen synths might be too much to give up.

from .cfg to .txt and open it with Text Edit on the Mac. When I'm done I change it back to .cfg.....

TDI bought a used ADAT card a while back and didn't install it until a month or so later. All of the lights come on, but it doesn't show up in the patchbay. I have tried different slots, different MEC's, etc. to no avail.

Has this happened to anyone else? I suppose the ADAT card is defective. Anybody know if thesoniq still repairs Paris stuff? Any experiences with them?

Thanks,

TDNice--

Thanks

Do you know how many channels at 96k the effects can handle? Besides the instability, the 16 channel limit on their current DSP is lame.

I mostly mean using the SSL mixer in an "advanced" ADM mode so you could use the Cubase or Samplitude mixer to control no-latency headphone sends, etc. without having to control everything from the SSL mixer. Basically make it transparent like an HD system or Paris.

So this will be under 3k, then you add one of their MADI breakout boxes?

32 channels @ 96k. This the same for all MADI devices.

The amount follows the sample rate so half the the number of DSP.

It technically will have 8 Duende PCI-e cards worth of DSP an don't have any latency being that they are only functioning in hardware.

The Duende plugin DSP devices add a bit of a buffer like the UAD and TC devices do to your sound card and programs delay compensation.

You also should be able to use the hardware buses with the effects on them as external effects in Cubase during a mix and or tracking.

>
> So this will be under 3k, then you add one of their MADI breakout boxes?

Yes thats what they claim. When the SSL guy asked me how much I think something like this would for I said \$8000 ha. Glad I was wrong.

Being Madi you can use can use the SSL Alpha Links, A bunch of the RME Madi stuff or a bunch of the digital mixing consoles.

You can mix and match the I/O quite a bit sense there are 2 64 channel Madi I/O ports to use.

>>Ah, the joys of getting set up with PARIS in XP for the first time.

Actually, it all went far more smoothly than I'd anticipated, but today

I was getting an error message upon startup -

"The application has failed to start because StockFX.ini was not found.

Re-installing the application may fix this problem".

Oddly, PARIS then goes ahead and starts up normally, as if nothing had happened. I searched my HD and there's no StockFX.ini to be found, and the EDS plugin lists do look skinnier than I recall. Any ideas?

Also - running a two-card, two MEC system, with the two connected via a WC cable (no external clock at the moment), will I still need to boot into 48k to have two MECs function properly, or will everything work fine booting into 44.1k? I'd be quite happy to never look at 48k again in my life.

Thanks!

- Kerry

Oh, PS: any suggestions on what should I be looking at changing *right away* from the defaults in my paris.cfg?KerryGalloway wrote:

Hi Kerry, Had the same problem recently after installing Mike Audet's versions of Chuck's plug-ins. I failed to follow Mike's instructions accurately and got the same message. I got rid of it by going over the installation instructions.(Right click My Computer- Advanced-Environment Variables- Path.....etc.) I am not 100% sure if this would help but you can give it a shot and see if it helps.

All the best,

CoalhouseAs for the 44.1 thing... in the past I would always launch Paris from a shortcut, THEN load a project (which are always 44.1)... never had to do anything more convoluted than that... Now, we have a Studio clock, and Paris is always set to external... still no problems.

David.

> All the best,
> CoalhouseThanks David. Now just to make sure I understand - by "from a
shortcut", you mean a shortcut directly to the app - and without having
a "Default Project.ppj" in the PARIS app folder? If so, I'll adopt that
workflow, it should be easy enough to remember. I can always store a
song template elsewhere and open that afterwards.

One other oddity re: clocking - When I do that - booting directly from
the PARIS app - my project window opens at a default of 44.1k, and the
indicator on MEC A correctly displays the 44.1k, but MEC B still
displays 48k. The indicator on MEC A tracks changes made to the
samplerate, and everything seems to play back just fine on both cards,
but MEC B sticks to displaying 48K no matter what the project setting
is. Is this normal behaviour?

>> All the best,

>> CoalhouseHi Kerry,

Are you running XP in HT mode or disable?

I replaced the stock (skunkworks file) PARIS_StudioControlLibrary .dll with Mike's new version which is supposed to allow using dual CPU mode (Hyper-threading) and yes Paris does run but I notice a longer boot up time of Paris (I'm ok with that, it's only about 10 secs different), but I've also had a crash. I am generally very stable in the disabled HT mode so I'm not sure if it was just something I did or if it needs a special install. All I did was save the original .dll into a backup folder and put Mike's PSCL .dll in it's place (c:\windows\system32).

There is another file in the same directory with the same name but no extension. PARIS_StudioControlLibrary with a file type of file. I don't know what this file is. 48K, but it has the same install date as the original .dll so I assume it went with the skunkworks install of the PSCL ..dll. Should this file stay? This file is not talked about much. I opened it with textpad to take a look and it's all hieroglyphics.

As always I cntrl-s quite often so I didn't have to redo to much. Is everybody else gone to HT and working stable?

Thanks all.

Wayne

>Hi Mike,

I appreciate everything you've done for us.

Anyway, I replied to Kerry's "stockFX" and asked him about the XP and HT (hyper-thread, dual/multi CPU) PSCL that you recently built. You can take a look at that if you wish and also want to make sure you don't misinterpret my post as a dig. Not at all. If I don't have to reboot in disable everytime I run Paris I will be very happy. So, in essence, Kerry said he was stable so I asked if he was in HT mode. I was also pinging the group to see who is running in HT now.

Reason: I had a crash (error message and then blue screen) and I don't know if it's something I did in the editor or if I missed something on the install/replacement of the .dll or if I just had a crash because I had a lot of windows open at the time. I am generally very stable in disable mode, but, if I'm doing heavy edits and extreme close up work even in disable mode, I save a lot, because I'm almost sure to get a crash now and then during those deep editing times. Running, mixing, playback, tracking are all stable. The crash came after about 4 hours of deep editing. Then I did another 4 hours just fine, so it may have been just a glitch. All this in HT mode.

But it did make me wonder if you've heard back from most of the group? Has everyone gone to HT mode with your updated PSCL?

See other post (Kerry's "stockFX.ini" for the following. Do I need to replace the other PSCL with no file extension in the c:\windows\system32 with one that is compatible with your updated PSCL? When I installed skunkworks XP and subsystem files several years back two PSCL's were put in the sys32 folder. One with a .dll and one with no file extension.

Again, thanks for all you've done.

Sincerely,
Wayne

Paris since '97Hi Wayne - I'm afraid I've got no insights on the multiprocessor thing as I'm on a single processor myself. Bear in mind that Mike's PSCL update is only a few days old, so you'll be one of the earliest adopters - looks like nobody's had a chance to report back in yet.

- Kerry

```

That's how it will always be. Mec B's clock light will not display accurately with either internal or external clock. Don't worry about that.

Sounds like you've got a stable setup. Make a clone then continue.

Keep it up!
Tom

Hi Wayne,

I'm fighting like hell to get the PSCL working reliably, but alas, it isn't yet.

I just found a bunch of really sketchy code to write to registers on the EDS cards - I'm fixing it up, but it will take time. It seems like the more I dig, the more unsafe code I find. And once I fix it, I find out it isn't the unsafe code that was causing the main problem.

The latest is that the driver randomly refuses to process interrupts - the app loads, but no audio passes beyond the first buffer sent to the card, and the C16 doesn't work. I thought this was a startup issue, but it can happen at any time while using the app. It's major mystery, and I may have to look at the scherzo driver to fix it.

The best way (though it doesn't seem to work on my quad core Phenom) is to use the original PSCL with the two pieces of software that I've posted to this message to lock the scherzo drivers and the paris app to the highest CPU.

I would love for someone to test out my pscl just to see if it works on their setup. If it works perfectly, then we can compare configs to help narrow down where the bug is. This, of course, takes time, and I understand that people are busy.

To answer the PSCL question directly, the PSCL with no file extension is the original one that ships with PARIS for windows 98. The XP minimum setup takes the ".dll" off the end and writes the updated version in the folder. Only the file with .dll at the end matters. The other one is ignored.

I'm not getting blue screens, but I have occasionally had "could not read memory" errors from two threads trying to open the debug log at the same time. You may need to restart the machine after copying the file. Windows may cache the original version, despite replacing the file on the disk.

I hope this helps. I'm working really hard to track down the cause of the main bug. It took me 3 weeks just to find any sign of code running differently when the app doesn't work right. The PSCL is huge and very complex.

To give you an example, I realized that about a third of the attempts to write to EDS registers were failing under the old code. I've got it down to about 2%, and I think those are registers that are updated by the card, because those registers always read back different no matter what I do..then I found out that "instruments" are being loaded into the EDS registers the same way. So, I need to create a new lock and implement it in a way that won't cause deadlocks. It just takes time.

I hope this helps, Wayne. I'm working really, really hard on this!

All the best,

Mike
