t bit concerned with how well I played the composition! I just wanted to get it out there, for the experiment, and not spend a whole lot of time fixing things up, in order to do it--- every note of it (good and bad), was recorded directly to my paris rig, using the preamps and eq of an old tascam 424 mkIII portastudio (if you can believe that!). I did NOT record it to the tape section of the portastudio first, and then play it into paris. it sounds like open reel to reel, because it's paris! enjoy the analog sound of it, if not the composition itself, or the playing of it---

to find it, go to:

harryepstein.org Very cool!Hey Daniel

Obviously this is late to the party, but really great production on this :)

TedHi Ted,

THX .

I had hope that i can read and know more released productions with this thread !

Cheers

Dan

bummer, the links aren't working anymore

Michaellt looks like VirtuaVia only has this available: PCI-Express x1 to dual PCI,
I guess that might work.

Interested in anything that is working for everyone that's on Window 7.

Thanks, michaellm not expert but thinking loud here !!!

I like how BURL AUDIO took over Paris MEC idea and made MOTHERSHIP system!
so ... Idea that came to my mind is to have something like BMB2 module in MEC instead of main
module !!!

for those who

since i work in PCB production company and we have 3 PICK N PLACE machines, mechanical
parts are easy, have that covered , but dont have somebody who would understand this ..

Im thinking to buy one BMB2 and to start there !!!
As far as i know Burl use next generation of Cyrus Logic AD and DA that is used in Paris.

Does anybody here have some knowladge on this.
it would be great to have AD DA box with paris converters!

what you guys think about this !This is BURL B80 System BMB2 MADI card

we need something like this!

Some info I found on web:

<https://rocketboards.org/foswiki/pub/Documentation/NetworkedProAudioFPGASoCDevelopmentKitByCoveloz/Coveloz%20Pro-Audio%2>

dont know .. this is BURL B80 mother ship!

http://www.apke-tontechnik.de/media/image/59/8c/4c/burl_b80_mothership.png
<https://s3.amazonaws.com/sonicc/uploads/burl-b80-mothership-rear.jpg>

does that remind you of something

and system has BMB2 module

<https://burlaudio.com/bmb2>

It would be great if we would have in paris instead of this module a BMB2 kind of module so in that case we would be able to use 32+32 streams

we already have MEC, 8in and 8 out cards / AD DAs that sound great!

WE NEED MADI INTERFACE!!!

Hardware in not a problem to manufacture
