Thanks. Yes I have a P4, but have HT off. The error message does have =

"cache: 460. . . " in it.(?)

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:4393cad7@linux...

Edna,

By chance are you using a P4 chip? If so make sure

Hyperthreading is turned off in your BIOS. That can really=20

ruin a nice day in Paris.

Tom

"Edna" <edna@texomaonline.com> wrote in message =
news:4392fb60@linux...

Hi Cujo,

Unfortunately, I was not able to save it. Paris would not let me do
anything at all until I responded to the error window and then it =
was all

gone! I tried to pull up the project window or do anything but it =
was a

hard freeze.

Since I only had a single submix going and was only using a couple =
effects

in the aux module on one channel, I was surprised to get this error. =

I have

a gig of memory and a fast processor as well. I am using XP pro =
with SP1

though.

Thanks,

E
