DJ,
I had that happen a few times in 2.01 with TimeStretch recently.

David, Chris and Aaron,

So far tonight I found out why Paris configs were not being saved.

I was told to remove the Paris Backup file for testing.

That's the config. . . Once it was back all C-16s worked fine and =
retained
their C-16 classic mode.

The stockFx.dll IS in the system 32 folder but doesn't seem to be found
at Paris start up for some reason. That being said all the stock =
effects
are present although no presets for them. mod3a.dll IS Chucks ModPack.
It is also present in System 32 folder but Windows says it's an =
unrecognized
file or something like that.

I tried saving a Default Project. Paris crashed at boot up using it and =
took Windows with it.
After removing it it worked fine.

The system seems sparky. Not loaded down with tons of effects yet =
that's for sure.

Anyone care to chime in on what I should do about the Paris start up =
errors?

Next I am making sure I get audio on all three cards and confirm Paris =
plugs are working properly.

My chainsaw has been bogging down after it's been running for 15 =
minutes. Any idea about that?
Tom

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:47213576@linux...

Aaron,

That's where I was yesterday just before I installed=20

Chucks plugs and a few VSTs that are wrapped.

The stock fx are working but not all of Chucks.

The presets weren't there for the stock ones either.

Tom
