phase EQ (but
you can also "analog-model" it, too). For 250 bucks, once you
hear it - to quote DJ - you will have to have it or you will
die.

Read all about it &am

p; get the demo here:

<http://www.izotope.com/products/audio/ozone/>

Neill've got Matt Craig's Paris EQ some where, but I don't have his comp. Can
somebody email me Matt Craig's comp?

Thanks
James

you connect it to a computer using it's USB port, can you access UAD cards,
patch the ADAT I/O into the Paris ADAT I/O, set up a Paris PB scenario
wherein the ADAT I/O is routed to different inserts and auxes and then
process Paris tracks using UAD-1 hardware with zero latency?

Guitars were kinda your typical numetal setup - EMG humbuckers through Mesa triple rectifier heads, one guy had a Mesa cab with Celestions & the other guys used an older Marshall cab, also with Celestions, but the Mesa cab sounded as if the speakers had a bit tighter cones.

*Signal chain for the guy with the Marshall cab (lead parts) was 2x Audix i5's through a Focusrite Red 8; same mics, but each mic on a different speaker, as the two bottom speakers had slightly different characteristics from one another.

*Signal Chain for the rhythm guitarist was an Audix i5 and a BLUE Ball, through Grace101 mic pre's.

Drums were a combination of e-kit & live mics. Kick, snare & toms were all e-kit. We also recorded the MIDI output so we could regenerate the sounds on separate tracks for more flexibility during mixdown. Snare & Tom samples were from the Roland TD-20 brain, Kick was from my Fantom. The only exception to this was the "industrial kit" sound at the start & end of "What This", which was all from the TD-20.

*Three cymbals were live & three were e-kit cymbals. Hi-Hats were live (we ended up using the hi-hat e-pad, though, anyway... moved it over on the other side of the kit for an extra tom pad.

*OH mics were TLM-103's and the Hi-Hat mic was an Earthworks TC-30, all through a Focusrite ISA 428, with impedances on the "ISA-110" setting.

Bass was direct through a Carvin head which had an XLR line-level out... you may remember my posts about this issue - the guys liked the sound at first, but after we'd recorded everything I was able to point out that it was a bit too indistinct, and we ended up reamping it through the Mesa Head/Cab combination on the cleanest possible settings, and also taking a line out into a Sansamp Bass module & retracking that signal on a separate track. Re-amping was handled by a TLM-103 - since I needed a mic that would emphasize the highs & definition, but still had excellent low-end extension - and run through a Neve Portico preamp. What you're hearing is a combination of the re-amp'ed track & the Sans-amped track, pretty much in equal proportion, with absolutely zero of the original track involved.

Vocals on the softer sections (like the verses in "What This") were tracked with the "Claytor-67" through a Chandler TG2 preamp. A TLM-103 through the Neve Portico was used on the harder sections of that song. The -103 through an ISA 428 was used on all the parts on "Bitch Liberte".Hey,

Sounds good. The ending of that second one is pretty cool. And you actually used amplifiers and microphones on the guitars. :)

<http://www.brenthugh.com/earrest/>

It simply throws notes at you. I've now got it hooked up through my fave digital piano with MIDI. It plays a note on my piano, and I have to try and hit that note. It doesn't care if I get the octave right, but I try and do

that anyhow.

You can decide how many/which notes you want it to test you on, and weight them so that some play more than others according to what you're bad at. I'm currently using the entire C major scale, and I'm getting about 98% correct when I'm not hung over. ;o) Earlier today I got over 100 questions correct in a row. Generally I get about 50 right and get overconfident or lose concentration and stuff one up, but if I'm concentrating I can get them pretty much all right.

I've read a few tips about the place net. It seems the skills generally come first to you on your natural instrument, and then slowly migrate over to others. Having said that I just had my first experience of what I'd call "real" perfect pitch earlier today, when, in between tests, while plugging in some MIDI stuff, my phone beeped an SMS and I went "Hey, that's F!!". ;o) I don't find I recognise the keys and notes in songs on the radio yet however, but no doubt that will come.

My aim is to get up to 98% averages on the entire chromatic scale at 440Hz by the end of the month, and then I'll start to worry about translating that on to tunes on the radio. I figure when you hear someone sing a note, it's not hard to imagine a piano playing the note, so if that's what I have to do to start with, so be it.

The good thing is I'm growing increasingly confident that it's working, and I'm pretty stoked about that. :o)

Cheers,
Kim.this is soooooooooo very disappointing...i thought it was going to be about a perfect pitcher of beer. but, i'm glad you're still happy with the product.

LOL! Yeah, but when the drummer says his kit is "crap", and so are some of his cymbals, plus he'd just broken his main crash the week before we were supposed to start and the bass player doesn't even have a cabinet (they go direct through his head into their PA live), then you kinda wing it & make some adjustments.

I guess I'm not too concerned about being a "purist" with regard to impressive micing of live instruments, especially if the situation doesn't allow for it; I'm more concerned with getting the artist an end result that they're over-the-top happy with.

The first certainly gives a great deal of self-satisfaction, no doubt about it, but the second sure gets you a lot of referrals.

Next up might be a hip-hop project if scheduling works out, so chances are there won't be but ONE mic involved in that one! lol

NeilHey Neil

My only comment is in the first tune the vocal phrasing seems out of time with the drums (or rhythm tracks) in certain spots which makes the groove jerky if you know what I mean.

Other than that sounds okay to me although I'm not familiar enough with the genre to make a comment on the mix

big time to it.

<http://tinyurl.com/o8gp5>

Enjoy,

JohnI checked out the second one, the drummer's right. Seems like he could have chosen more convincing sounds (you sure that wasn't a TD10?), but since the MIDI tracks are available drum sample replacement should be no prob. Or maybe he likes those sounds, who knows. As long as the client is happy.

Guitars sound good.

Cheers,

-Jamie

there were a way to combine these hardwares, it would be a match made
in heaven.

The Muse is basically a 2U AMD-cpu'd computer running a tight Linux
distro with a Windows virtual computer inside to run and control the
VST(i). If Muse would partner up with the folks at Magma, I bet they
could work out a way to get expansion cards into the Muse and then the
sky would be the limit.
