out with. These are personal and ownership issues which can only be fixed by the persons and owners finding a new place to life.

My suggestion? Get in touch with the people you like, reform as a yahoo or other listserv, and the 'old timers' will be back again. You might even want to admin the listserv and/or ng. It's not all that miserably complicated.

Think of it this way. Your favorite restaurant, with your favorite waiters and chef and bartenders shut down. Now you have to find a new home. Hanging around in the Applebee's that replaced it and complaining gets you nowhere, even if the owner of the original place buggered off.

Jamie,

Did you look into the metric halo stuff?

[http://www.mhllabs.com/metric\\_halo/products/mio/](http://www.mhllabs.com/metric_halo/products/mio/)

I use both the 2882 and the ULN2 with a PB (MB pro is on it's way) and I am very pleased with them.  
The ULN2 has very high quality mic pre's and drivers are very stable (Mac only)  
The +DSP version comes with channelstrip and other nice plugins.  
The units are buspowerable for use in the field and the MIO mixer has the record-panel, an integrated recording software.  
And of course, when your wife is not using it, you may hook it up to your system:)  
And one more thing, the guys at metric halo are awesome both in knowledge recording community to fire any questions you may have. Most of the time you'll get an answer from one of the Buchalters, the makers of the Mobile IO. All in all, a great value.

Regards,  
Ab

She has a specific project coming up quickly for this setup so she needed to make her decision today. After considering what she really needs the gear to do and looking at a list of possibilities, she chose the TC Konnekt 8 that Dedric mentioned (specs look quite good) along with a Studio Projects C1. I'm looking forward to hearing them with her amazing voice. If we don't like the results we can exchange them...

Cheers,  
-Jamie

www.adkproaudio.com

chrisl@adkproaudio.comHi DJ,

EMU simple = No.

Unless she is Sonar the TC Konnekt8 or 24D is pretty rocking. driver and  
chip set wise it works no better or worse than the other units in its  
price range. The analog line and MIC-pre sound better than the other in

its price range. The effects on 24D can be used on input monitoring or as a plug-in. using them on the input monitoring side is easy IMHO. The effects are from the Powercore and run on hardware DSP.

Chris

```

I'm surprised about the latency and phasing issue though. Mine works perfect with my little crappy G4 Power Book. Just plug it in and go. Oops, I forgot. Mac's suck. It's probably just my imagination that it's working. ;>)

Seriously, I guess I've been extremely lucky that I don't have these kinds of problems. I've always just assumed all the marketing hype was at least a little true and Mac's really were better at "plug and play". Maybe, like I say, I've just been lucky (knock wood). Anyway, sorry to hear about the hassles.

Tony

Remember what he wants: good mic pre, monitor-able reverb, but tracking quality isn't all that important since he said he'd be importing those rough tracks for do-overs later.

He basically needs a Radio Shack cassette player fed by a TC Helicon VoiceWorks.

:)

> Where do you change Disk cashe size on a G4?Master Bang Soo Han has died.

If you were into martial arts in the 1970's (and who wasn't?)  
you knew of this guy:

<http://www.martialinfo.com/comments/BongSooHan/>

Anyone remember the "Billy Jack" movies? That was Han in the fighting scenes, not the actor. Han went on to found one of the great schools of Martial Arts and influenced thousands.

He will be missed.

DCLaunch Paris,

In the projct window, before you load a project, go to the "settings" menu (I think) Increase cache and overviews a bit, quit and relaunch Paris. Increase the settings till the error goes away.

David.

Steve Cox wrote:

> Where do you change Disk cashe size on a G4?Project window in Paris. Under the settings tab/configurations.

The settings depend alot on how many tracks and how many edits you have. I personally use 128k in the i/o and 128 meg in the Disk Cache. I also set the overview cache to 8192 if I don't have a lot of edits, but typically by the time I get to mix stage I'll up it to 21000k. I currently have it there.

I have, on occasion, upped the i/o AND cache to 256 (need to manually edit the paris config file for the i/o) and set the ove cache to 256000. I can't vouche for the settings in your situation....I'm on a PC, but upping them will definatly get rid of the error. You just have to strike a balance between no error and Paris running a little more sluggishly as it has to take bigger bites data.

>Where do you change Disk cashe size on a G4?I don't understand your question or use  
scenario. Song tempo should make no  
difference to PARIS. If you're trying to slave PARIS to some kind of  
varispeed control outputting from another device, then provide some detail  
as to all your device connections and give some general idea as to what  
you're trying to do and someone here can help. It is not clear what is  
meant by "I run thru my MPC 2000" or by "when I record them alone" Please  
alo describe what exactly you're hearing that you belive you should not be  
hearing.

Stevens there a Paris vidio anywhere for tips on recording? I thought a while back  
I saw something on the forum regarding a vidio....

Stevell'm assuming you're talking about the now line in the editor window...it's a  
glitch...just close that window and reopen it and bob's your uncle the now  
line's moving again

I don't remember any video per say.

But The Womb ( <http://womb.mixerman.net/index.php> ) is planning to begin a  
"how to" series on recording various instruments and if I understand  
correctly eventually move on to the various aspects of mixing.

The reason I mention this is because I'm pretty sure I am doing the first  
"how to" on recording drums today (killing two birds in one recording  
session) and depending on how in depth the Engineer wants to get we could  
easily be shooting tomorw...at least that's what I've been told.

tle O l d Lady: It felt good. Nobody had done that since my Abner died some 30 years ago.

Defense Attorney: What happened next?

Little Old Lady: He began to rub my breasts.

Defense Attorney: Did you stop him then?

Little Old Lady: No, I did not stop him.

Defense Attorney: Why not?

Little Old Lady: His rubbing made me feel all alive and excited. I haven't felt that good in years!

Defense Attorney: What happened next?

Little Old Lady: Well, by then, I was feeling really "spicy" that I just laid down and told him "Take me, young man. Take me!"

Defense Attorney: Did he take you?

Little Old Lady: Hell, no! He just yelled, "April Fool!" And that's when I shot him, the little bastard! don't think Duende works with ANYTHING if you're on a PC - they were having some real driver issues with the PC side of things. Maybe check their forum to see if they've fixed it (assuming you're, in fact, on a PC).

>>Does anyone know where I can get a copy of the Video Aaron did with Brian Tankersley??<rant>

I bought a copy of Native Instruments Electronic Instruments 2XT recently and have tried to install and register it twice now. Each time, I've gotten a threatening message telling me that I have an Invalid System ID and that all my information is being forwarded to the NI webmaster for review. The first time that happened, I sent an email to the NI tech support people. The response was to do a "clean uninstall" and reinstall. Did that, with the exact same result, so I've had to send in another email. It's been a while since I've installed an NI product, but now my memories are flooding back...

Does anyone else hate the Native Instruments registration process as much as I do?

</rant>

Doug ("...give me dongles or give me death...")

<http://www.parisfaqs.com>David -

Wow- I didn't know this.

You are a veritable fountain of remarkably obscure but nonetheless useful advice and commentary!

You need to get out more... :)

But I didn't let them blow me off with any "well try a clean install, or  
try our new registration format" I figured I paid a lot of money for this  
and I made him stay on the phone with me until all was up and running.

>I just installed Bandstand, GPO and B4ll on a new system with nary a whimper. I have never gotten an invalid system ID message.....but, the NI products can only be authorized for two machines. If you are installing on a new machine and you already have used your two authorizations, you can de-authorize one or both of them.....but this is permanent. If you have de-authorized your NI app for the machine you are trying to install it on, you're going to have problems.....and of course, when you went the deauthorization window to perform this process initially, you were greeted with numbers, not a name that would identify which machine you had authorized the software for, so it's pretty easy to screw the pooch if you deauthorize the wrong machine because you can never reload the software on it again.....neat, huh?

Back when I was a Paris dealer I was in pre production for a quick start video, but EMU pulled the plug. I never got around to doing it. Some times I still think about doing Paris instructional videos myself, and every time I do I tell myself to shut up; )

If everybody would breakout their video cameras and do a quick tips video on their favor paris trick and upload it to uTube, that would rock. Screen capture software would also help in this kind of endeavor. Even a powerpoint styled slide show with audio would work. If people would shoot me video files or send me tapes, I would make DVDs for everybody, any takers?

So you're basing everything on a self-referential structure? ("Jesus  
said that he was Jesus.") Isn't that the same as saying the Flying  
Spaghetti Monster said he was the Flying Spaghetti Monster? (See  
<http://www.venganza.org>) Seems to me that using that kind of  
self-referential argument "is irrational and allows you to say things  
that make no sense", to selectively quote... ;-)

How do we truly know what Jesus said? Aren't we back to the question of  
inerrancy of scripture? How can we prove the accuracy of any quotes  
from Jesus in the Gospels when the first of the canonical Gospels wasn't  
even written until at least 50 CE, and more likely somewhere around 70  
CE? And of the four gospels, why is it that only John asserts that  
Jesus is God? (Refer back to a previous message when I wondered how the  
church would have been different if the Gospel of Thomas had been chosen  
by Irenaeus instead of the Gospel of John. But of course he couldn't do  
that; he was a fine upstanding member of the Orthodoxy.) Interestingly,  
John was the last of the four Gospels, having been most likely completed

somewhere after 90 CE. The Rylands Papyrus, which is the earliest actual fragment of the John manuscript, dates from about 125 CE. (BTW, please use "AD" if the more scholarly "CE" offends you.)

> Unless of course, you think all sources are equal, or  
> the truth cannot be known.

I don't believe all sources are equal, but again, who is to determine which source is true or false? When you tell me that Jesus said that he was Jesus, am I to infer that you are the arbiter of that truth?

> Both, of course, rest on the assumption of atheism.

Are you claiming that all non-Christians are atheists? There are at least three major religious groups that profess belief in the God of Abraham, yet not all of them agree on the role of Jesus.

NOTE: If you substitute the word agnosticism for atheism in that sentence, then there is a possibility that we may be able to agree.

> However, if you consider that Jesus was who he said he was,

Again, how do we truly know who Jesus said he was? Can you prove inerrancy of scripture content and source?

> than those who have provided the gospel canon to us, and  
> rejected some of the other writings, may have done so for  
> a good reason.

Absolutely. My belief is that that good reason was and is to control the masses and indeed, keep them from true enlightenment, since enlightened individuals rarely make for an orderly society.

> What are your assumptions?

(Since you asked...) :-) I believe I have articulated many of my assumptions through my questions, but adding to the previous paragraph, and to put it in the proverbial nutshell, I am not an atheist, I do not believe in the inerrancy of scripture, I believe that both canonical and apochryphal writings have been chosen and modified knowingly and unknowingly by humans over the centuries for various reasons and agendas, and any cries of heresy are purely protectionist strategies. I assume that the importance of the Bible is primarily allegorical and I do not take the resurrection to be a literal event. How's that for a start?

>> Will you answer the simple question: What if Jesus  
>> was not who you say he said he was? Or is that unthinkable?  
>

> How would you determine this?

\*BINGO!\* :-) Isn't this the crux of the entire conversation? How can you/anyone presume to tell me/us that "you" are right and "we" are wrong without providing a way to determine this?

>> I'm not so sure of that clarity you claim. Will you clear up the Synoptic  
>> Problem for me? Or do you deny that the problem exists?

>

> Not enough time. I can refer you to some other readings  
> later if you like.

Not enough time? Same reason you haven't answered the vast majority of my other questions? You seem quite willing to take the time to further your own agenda, imply that I am a heretic and directly accuse Thad of being a bigot, but when I ask for justification you don't have enough time? Can you not "respond to a point I have made"?

BTW, do I need to state what I consider to be the obvious? That I have already indulged in many of those readings? (Or would that be considered a "credential-comparison" or "establishment of authority"?)

Dj, just stop! That Apple software will seep in to your brain and corrode  
it; )

I'll first say I hardly use iTunes, but I do use it on occasion. I'll point  
out some things that may or may not be obvious. The price is right! It  
will do encoding and audio file format conversion. You can create play list

and organize your music for quick access, and you can also burn audio CDs with it.

I've used it to DJ weddings, parties and camping trips. A true story. I was at a wedding doing video and the bride was literally crying at her wedding because the DJ the company sent out didn't bring the bride and father song he was supposed to. I used the DJ's windows laptop and installed iTunes, downloaded the song and saved the day. I guess I could have used something else, but it was a long time ago and iTunes worked.

I've used it to search an artist content to find a song when I didn't know the song title, by playing the snippets. I've listened to new records to get a sampling of what's on it before I buy it. Some times I'll check out movie trailers. Some times, I actually use it to listen to my music while I'm on the tube. Just drop your CDs in and hit import. You can also do drag and drop. I also use it to listen to the net radio shows while I work.

There is a lot of cool stuff on iTunes that is free. The thing I find coolest about it is the Pod casts. Check it out, if you go to the store and click on podcasts, there is a bunch of categories. select a category and pick

Something you're interested in and subscribe. It will download the pod casts. It is mostly audio and some videos. There are a lot of radio shows, instructional videos. There is all kinds of stuff, like real-estate, investment, business, comedy, music, motivational speaking, news, learning video production, cooking to learning spanish. The best part is most of it is free.

There is a lot there. Have fun with it.

James I should have mentioned that you don't have to subscribe to the podcasts, if you just want to listen or watch one of them, just click on them one at a time. If it's video, double click on the video to open a larger screen.

There are PhotoShop quick tips video podcasts there. You can also create your own podcasts and upload them.

There is one screwy thing about iTunes. If you add original music that has no meta info, iTunes will try to figure out what it is based on song length or something, and it will sometimes give it a wrong name. So you kind of have to watch it, and correct the name if it does that.

James

As long as the board posts into the BIOS you will have a chance to make  
it work. You might have to mess around with the BIOS CPU settings.

For the last 3 years, Itunes has been our studio standard MP3,wav file player.

BUT..Ms new Media Player 11 is great as well. The search function is stellar,  
as is the playback engine.

Hey, can I come over and record some death metal?

Doug (uplifting and inspiring...!)Hmmmmm.....I wonder where they got the idea for that search function and the look? Can you say Aqua? There new logos look familiar too! Nothing like originality!
