>Quick and dirty guitar production for \$99.00!

Considering it also serves as a portable USB audio interface I'm thinking it's a buy. I would use it for demoing/writing/reamping. I'm not a guitar player, but it might help me learn to play better also.

Let me know what you guys think of the sound and capabilities.

Check out the sounds.

<http://www.digitech.com/RP150Demo/>

MP3 demos at the bottom.

[http://www.musiciansfriend.com/product/DigiTech-RP150-Multi- Effects-Pedal?sku=156606](http://www.musiciansfriend.com/product/DigiTech-RP150-Multi-Effects-Pedal?sku=156606)

JamesThis Tommy Detamore interview is up on Project Studio Network, show number 57. It's quite an eye-opener that at some point in the interview, the guy from PSN admits he's never heard of Paris. So from that point on it's all about that "vintage DAW", Paris.. :-)

Lot's of good samples of Tommy's playing as well. Very interesting...

3 more project conversions and then...my PARIS rig goes up for sale.
I have been rendering all my projects to WAV files.
3 more projects and I am done.

Should be done this week.
So next week I start the transition to Cubase SX3.
I have been checkin out some tutorials for Cubase.
Lots to learn.

BrandonCheck this out;
<http://spyder.brp.com/en-US/>I'm loving the 9652 rme card with 3 digimax fs's and cubase 4. I
have a lot
to learn but it's pretty sweet.

>Hi,
Whilst love Paris to bits, there are certain features - or lack of features
- that are starting to grate and I suspect at some point I'll end up on SX
or with a Digi 002. In the meantime, I'd like to get more familiar with SX
(or something else), have the option of running more than 4 inserts in Paris
(I don't know anything about plug-in wrappers I'm afraid), be able to run
external plug in effects on the Paris inserts (e.g. processing as external
insert via ADAT another PC), use midi, etc.

I've got my main Paris PC. 2 EDS, MEC with Adat and + 8 i/o and a 442.

I've got a second PC that could run Cubase SX with an (v1) Event Gina PCI
soundcard, which features Adat I/O (together with 2 in / 8 out + SPDIF).

Just to confuse things, I have a Korg Oasys PCI card which only runs under
w98/me, so that goes in a third PC (this has Adat I/O and analogue A/O +
SPDIF).

I've also got a Midiman USB 2x2 midi interface - though I'm guessing I may need a few more of these to link everything together.

I'm not quite sure how all this should be best integrated into one system, particularly in terms of syncing / world clock / MIDI. It seems to me that the Paris PC would be for audio, linked by adat I/O to the SX PC, which would be used for MIDI work and further audio processing (e.g. inserts on Paris). The Oasys PC is effectively just a hardware synth - it would take Midi out from the SX PC and output audio via SPDIF back into Paris for recording / mixing (Though it is also capable of audio processing / fx (filters are nice)).

Any bright ideas on how to sync Paris with, especially, the Cubase PC (MIDI? Midi over LAN? etc?) greatly appreciated. (LAN is currently not gigabit, but might upgrade if nec). Or any ideas on how best to configure this hardware / software setups, etc.

Many thanks in advance for any tips.

Cheers,

Danlf DJ doesn't get a Radar he's gonna die !"James McCloskey" <excelsm@hotmail.com> wrote:

Pretty soon it's gonna be like that scene in Waterworld where the drifter tries to trade Costner a few sheets of dry paper for the women. "Look, it's PEEEYper... a whole clan's lifetime collection. Diya ever smell anything like that? <snif, sniff> Peyper, see, it's PEEEEEEYPER!"

"It's TEEEYPE!, TEEEYPE, man! Diya ever smell anything like tha'? <snif, sniff>. I'll treede ya one roll of 456 for all the women!"

lolWell changing to slot 2 did cause a change: as its booting into the software, the mec will sync but then I get the error message 7/7. The c-16 never lights. I guess I might try another video card (non matrox) and see if that helps.

I did try another scsi cable, no effect. I hope I haven't damaged the eds card somehow.

my board cannot detect my eds card
have changed all slots in all positions and all various drivers.
thanx for help me
michaelHey Rick! I have a Firewire USB combo PCI card that has down loadable 95/98/2000
drivers. As I recall, it worked fine with 98. I had some problems with
XP. I think it was an IRQ issue. It worked with XP, but when I added more
PCI cards I had problems, so I pulled it.

If your interested, I could send it to you, if it works for you send me \$20.00,
if not just send it back. It has 3 FW connecters one internal two external
and two external USB connecters.

James

monitoring from a different interface than the one you are recording
through will create some problems, if it works at all.

David.

Just wanted to thank Mike and Gene for their assistance.
It seems the problem is resolved. I realized that I didn't have the entire system grounded to one point. Once I fixed this all the hum problems disappeared. Now back to music.
MR

"Mike R." <emarenot@yahoo.com> wrote in message news:45cf5006\$1@linux...
Very strange, my MEC seems to be generating some hum, like 60hz ground-problems stuff. Even when the thing is unplugged, I still get the hum. The only time it goes away is when I unplug the audio cables running from the monitor outs to the mix board. I hate to say it, but the cables are unbalanced instrument cables. Unplugged from the MEC, but still hooked into the board there is no hum, plugged back into the MEC -hum. Does this make sense -even when the power cord from the MEC is unplugged? The only thing I can think is to get some balanced cables, but if the cables (unplugged from the MEC) create no hum, will balanced cables solve the

problem? I'm stumped --unless its some energy from the galactic core, washing over my home town and somehow tuned to the frequency of the MEC -now that would make at least SOME sense :-)

Thanks for any feedback,
MR

thanks james, i'll give it some thought as i have removable drive
bays and can swap them between the SE and XP rigs. the XP one does
have firewire card that i can connect a fw drive (fat32 format) and
transfer the files to from the swap drive to the mac. god, i feel
related to deej in some weird way.

Is 1 channel of good tube preamp worth more than say a UAD?
Should I get a ribbon mic or more SM57s or 421s?

thx
b

>OOOOH! We get to spend someone else's money for them! lol

OK, at first glance, you need more mics. Actually it really depends on what you want to do or are trying to accomplish that should determine what you buy next that might get you closer to that end, but I'm going on the fact that awhile ago you said you wanted to start bringing outside work into your place; and if that's still the case, you definitely need more mics if you're going to try & record a full group of any kind in any genre. I think the 3-or-4-mic drumkit thang is not practical in every application, so bearing that in mind, if I were you (and I'm not, but if I was) I would think about something along the lines of the following setup:

Kick = Beta 52 (which you currently own)
Snare = SM57 (which you currently own)
Hat = (I suppose you could use that Behr Omni)
Tom1 = Need something for at least 3 Toms
Tom2 = See above
Tom3 = See above
OH's = Your two 414's or the NT5's (you already have)
Room = NT5's or the 414's (you already have)

Those Behr Omni's are crap, frankly - I had a pair for awhile & shitcanned 'em... very noisy, but you may as well use it on hat, as I can't imagine anything else they'd be good for, and hey for \$49 it's not like you've invested a lot in it. You don't "need" a separate hi-hat mic, of course, as often you can pick up enough hats in the OH's, but it's nice to have a separate track of that for imaging; so stick it on hats & make it earn its keep.

This leaves you, as of right now, short some tom mics, and with one or two SM57's (not sure which # of those you said you have), so you could single-mic a guitar or maybe two - do those DBX 586's have a DI on each channel? If so, then you can take a bass guitar direct. So go buy 3 or 4 Audix D2's, 3's or 4's, whichever you like best, for toms & an Audix i5 for another instrument mic or scratch vox unless you want to let the CAD hang in there for scratch trax, too. In either case, there's about \$800 worth of Audix Dynamics that'll pay for themselves real quick-like & which you'll immediately appreciate the sound of.

You've got some halfway-decent SDC's, and a couple of good LDC's so if you need to record stuff like acoustic instruments you could likely get by just fine with what you

I decided to get it souly for its diversity.
I am thinking I will sell one dbx for now and get an SM7B
like TC suggested.
Also pick up some tom mics like Neil suggested.

>I assume that you were planning to get the two MOTU boxes as
your interface for Cubase... correct? Why not get one, then
get a different brand of 8ch mic pre with adat output for
different flavour. That would still give you 16 mic ins,
but you wouldn't have to have the same pre's on all of them.

Past that, I would get some more mic's as already suggested.

David.
