uld

make it sound like I have a clear grasp, I don't feel that I do quite yet. Well, I kind of do. I'm getting the feeling at the moment that I'm doing ok at recognising the qualities of the notes, but what I need to learn is to actually listen for these qualities. I have experienced a lifetime of listening simply for relative pitch, and in that have learned quite well to ignore the note colors. I'm fighting to break that habit. The habit of listening to the relative pitches and trying to guess from there.

But I can hear it, I'm confident of that. I'm just trying to work out how to make myself more aware of it, and more focussed on it. There are 12 notes, and there are a number of them I don't have a grasp on yet, and some I have far more of a grasp than others. There's only a few I feel I really know.

Cheers,
Kim.
