<https://www.rampcsystems.com/product/6-pci-slot-computer-industrial>Just in case anyone is reading this thread, my advice is to get a Magma 13 slot P13R or the 7 slot P7R4 on ebay, upgrade with quiet fans, and run on a total modern, Windows 10 computer using Mike Audet's drivers. Runs great, you'll have access to all of the latest hardware, and you can run Reaper on the same system and that fills in some important holes that PARIS has.

Here's the detailed Magma info (c. early 2020) with part numbers:

You want either the 13 slot P13R or the 7 slot P7R4. With the 13 slot you'll also need a card that goes into the Magma chassi
