d use. The two companies have been in a dispute over this issue for more than 25 years.

Steve Jobs said the long running dispute had been "painful". "We love the Beatles and it has been painful being at odds with them over these trademarks." he said. "It feels great to resolve this in a positive manner, and in a way that should remove the potential of further disagreements in the future."

The dispute dates back to 1980, when the George Harrison noticed an advert for Apple computers in a magazine. "It is great to put this dispute behind us and move on. The years ahead are going to be very exciting times for us." Apple Corps manager Neil Aspinall said. "We wish Apple Inc every success and look forward to many years of peaceful co-operation with them."

>Gene's explanation is excellent and the 'standard' way to do this, but just FYI I've been doing the same thing with a stereo room pair lately with excellent results. It was mostly and accident as the room pair was an afterthought to the drum tracking process, but they came in very handy as the smashed sound behind the main mix. I think it sounds a little heavier, more Zeppelin-ish, with the smashed room mics instead of a copy of the main mix smashed up.

Also, I'm not a huge fan of this 'trick' in general, but I have some minimalist tendencies to begin with.

[illegible]

I don't really agree with this 100%. Some things just sound better than others I think. for instance, the reason I bounce a lot of my decisions off my wife is because she doesn't have a dog in the fight as far as whether tape/tubes/digital/solid state sounds better. she does have incredibly sensitive hearing though. She could care less why something sounds good and so is not caught up in the hype about what this and that **should** sound like. She liked Paris and she likes some ITB Cubase stuff as well, but she really noticed the difference the 5042 made and considered it as a positive addition to the mix without having a bunch of preconceptions about why.

I, OTOH, grew up listening to vinyl that was recorded to tape and I will admit to my predelection to refer to this as a benchmark, even

gt;And frankly, his accusations that I was rigging some tests (for
>what? WTF personal gain could I possibly get, or motivation
>could I possibly have to do that?) have gotten on my last nerve.
>You know, when DeeJ & Gene were talking about the Bedini BASE
>unit, I went & found a CD I had recorded & mixed back in '91
>using the BASE process, and I was going to post some clips
>of what it sounded like - I don't think the guys would mind,
>I know them pretty well, and the band's long broken up, etc. -
>but since there was no version available without it, I knew I'd
>just get more shit from Lamont for posting 'em: "So what's this
>unit doing? How can you ex
