t as high a degree of bleed as you would get if
you hadn't gated them at all.

FYI when I was mentioning that I used to gate the hell out of
drums back during "that" era, I wasn't necessarily referring to
the Collins gated-reverb thang or gated-live-ambience (although
in SOME cases, yes, that was the intent) I was really referring
to gating the drums themselves - the purpose being to get more
of a discrete drum sound... I think that's mainly a Def Leppard
influence there - for awhile there, it seems lots of the rock
guys were asking: "Can you get my drums to sound like this?"
and they'd hold up a copy of Pyromania. So, sometimes you'd

trigger samples even back then but most often I could get something they liked with just the kit itself. Gate the kick, snare, toms, add some exciter to the toms to enhance the stick hit, all these discrete, distinct drum sounds that would just seem to explode when you applied any 'verb to 'em, since there was no rumble behind anything except the overheads & hat mic.

I think Lamont's right in the sense that nowadays the trend seems to be going back to a more natural kit ambience, but it's obviously supplemented by a lot of samples, and in modern rock or metal it's also a whole different feel - no one's really looking for that "exploding" drum sound, they want the drums to be a constant roar - just look at how much these newer guys are all over the brass CONSTANTLY, they've gone from that splashy open-hat sound to simply using crashes as hi-hats, more or less. Fills are a lot shorter than they used to be, there's no measure-long tom rolls, as that would take them off the cymbals too long LOL and it's generally a more straight-ahead style, in my view... you gotta keep that drive and angst going. :D

OK, now I feel old. lol

Neil

-----=_NextPart_000_0359_01C80B21.79A434D0--Hey Aaron, No easy feat,LET ME TELL YOU!
:) To get GVI going, you must delete
all incarnations of GigaStudo, Gigasampler (Folders, drivers, dlls..everything).

Then, reload GVI.. Note: GVI and Gigastudio cannot reside on the same computer.
