

aid those stories of hookers dressing him in =
diapers=20
were not true. Boy, what do you do there? Are you supposed to take the =
word of a=20
politician over a hooker? It's a tough decision for people." --Jay=20
Leno

"Vitter's wife was by his side when he made the =
announcement. She=20
called the senator her 'best friend.' Unfortunately, his best friend is =
someone=20
named Thumper." --Jay Leno

"At his press conference yesterday, =
where he=20
admitted being involved with prostitutes, Louisiana Senator David Vitter =

apologized to his longtime supporters -- the working men and the working =
girls=20
of Louisiana." --Jay Leno

"Last night, down in Washington, DC, =
they had=20
the all-night Senate session. The senators were there all night. It was =
the DC=20
madam's slowest night ever." --David Letterman

"The darling of =
the=20
religious right, conservative Senator David Vitter of Louisiana, not =
only=20
admitted to having sex with prostitutes, he would pay them \$300 to make =
him wear=20
diapers. And today that crazy astronaut called him 'my dream guy, he's =
got my=20
vote!" --Jay Leno

"Vitter put out a statement saying he only =
started=20
cheating on his wife after he started hanging out with the wrong crowd, =
you=20
know, Giuliani, Newt Gingrich, the mayor of LA." --Jay =
Leno

"David Vitter=20
has admitted he dates hookers in Washington, D.C., and also in =
Louisiana. He=20
said in his defense he always selected the girl who made the lowest bid, =
so he's=20
fiscally prudent." --David Letterman

"There's another one of =
those=20
prostitution scandals down there in Washington, DC. Louisiana Senator =
David=20
Vitter admitted that he's been visiting Washington area prostitutes. And =
I=20
thought about this, 'Whoa, wait a minute, a politician, paying for a =

hooker? I=20
didn't see that comin.'" --David Letterman

"But good for Vitter, =
he said=20
that it did not cost the taxpayers a cent. He pays for the hookers with =
his=20
bribe money." --David Letterman

"Well now more problems with =
this Vitter=20
guy. You gotta go on his website, he's like Mr. Religious, Mr. Family =
Values.=20
Well now a second madam has come forward and told the Associated Press =
that he=20
was also a customer at her brothel. This guy was cheating on his hooker =
with=20
another hooker." --Jay Leno

"And this madam says that Vitter was =
not only=20
having sex with the prostitutes -- this is unbelievable -- he would also =
pay=20
them to dress him up in a diaper. See, that's what you call a pampered=20
politician. And she also said today in an interview that he sometimes =
paid \$300=20
an hour just to have the hookers talk to him because his wife didn't =
listen to=20
him. Well, I bet she's all ears now." --Jay Leno

"Republican =
Senator and=20
family values conservative -- that's what he calls himself -- Senator =
David=20
Vitter of Louisiana admitted he was a client of the so called DC Madam =
in=20
Washington. See, this is so wrong. At least use a hooker from your own =
state. I=20
mean they're gonna pump money into the economy, make it your own." --Jay =

Leno

"Family values conservative Republican Senator from =
Louisiana David=20
Vitter admitted he has had sex with prostitutes. Apparently years ago =
this=20
Senator Vitter guy had been seeing one of the DC Madam's escorts. You =
think the=20
Senator's embarrassed? How about the hooker? Now the whole world knows =
she had=20
sex with a politician, eww." --Jay Leno

"But he says he's not =
going to=20
talk about it out of respect for his wife, that's what he said today. =
It's all=20
these guys getting caught with hookers, they have this newfound respect =
for=20
their wife. Ya know something, when his pants were down around his =
ankles=20

leaving the motel, I don't see him going 'you know, I love my wife.' =
Well you=20
know what makes it especially hypocritical: apparently Vitter has been a =
strong=20
opponent of same-sex marriage, but today he explained that too. =
Apparently he's=20
against having sex with the person you're married to." --Jay Leno =

"They=20
have prostitutes in Washington D.C., and it now turns out that senators =
and=20
congressmen and important, powerful people are dating the prostitutes. =
.... And=20
there's a senator from Louisiana, David Vitter, admitted he's been =
dating=20
prostitutes. And he was very generous with one girl, he paid her with a =
new=20
highway project in her home state. ... One thing I'll say for this guy =
from=20
Louisiana, this David Vitter, at least he went to a professional and =
left the=20
congressional pages alone." --David Letterman

"Right now, =
Washington, DC,=20
is in the grips and throws of a big prostitution ring sex scandal. =
High-powered=20
politicians going to visit prostitutes. The call girl agency had a =
slogan. The=20
slogan was 'We take care of you below the beltway'" --David=20
Letterman

"The Washington, D.C., madam has threatened to release =
more=20
names of Washington politicians who were her customers. ... She says =
another=20
member of the White House will be named very soon. This proves once =
again that=20
members of the Bush administration don't know when it's time to pull =
out." --Jay=20
Leno

"Politicians having sex with prostitutes? What's the matter? =
All of=20
a sudden, congressional pages aren't good enough anymore?" --David =
Letterman=20

"There's a big scandal going on down in Washington, DC, with a=20
prostitution ring. ... Politicians were actually paying for sex. One =
girl got=20
paid with a military base in her home state." --David =
Letterman.</DIV>
<DIV> </DIV>
<DIV> </DIV>
<DIV>Will Client #9 get equal=20
time?</DIV></BODY></HTML>

-----=_NextPart_000_0027_01C8837F.A23078B0--you know which Kim who you are.....;o)Short memory, eh? :^)

Did you forget about Bill Clinton? Leno is still making hay out of his sex scandal. Doesn't matter what party you're in, if you "screw up" in office, jokes will fly.

Politicians make late night TV too easy sometimes. ;^)

Ol' Bob hit some pretty good high ones didn't he? This was around 1980, long after the ZepIII album. I'm with you though, Bob lost some of his upper

range zing after Zep II.

;o)Unless you call on ALL sex-scandal-tinged politicians to commit suicide, you're simply putting forth your own double standard. A twisted one at that.

Sunshine is good, though. :^)

Cheers,

I thought if it was a sure thing it wasn't gambling.

You guys have way too much time on your hands!

steve

hey, for a complete change of mental state, listen to Lou's new CD!This is truly amazing!

<http://www.celemony.com/cms/index.php?id=dna>

Direct Note Access is a technology that makes the impossible possible: for the first time in audio recording history you can identify and edit individual notes within polyphonic audio material. The unique access that Melodyne affords to pitch, timing, note lengths and other parameters of melodic notes will now also be afforded to individual notes within chords. This is unbelievably cool on one level and sorta'

.....errrrrr.....I'm not really sure....scary maybe???.....on another level. It is however, very amazing and I will have to have it or I will die. I believe this will be a part of the every mix engineer's toolkit, since the impossible is now possible, and we will be required to fix entire clambeds.....at no extra charge of course. Is overdubbing now dead?

everyone was recorded at the same time) this is one of the biggest things

I have noticed around here, singers just aren't used to nailing group vocals anymore.

Come to think of it...I really don't want to be able to fix that sort of stuff. Just do it right. It IS something I've noticed in the last few years though.

The world, as we know it is coming to an end. I was gonna start intensifying
my practicing on guitar but now I don't even need to.

nds, in most cases, go and
see loud amplified acts in a room, for the most part, full of strangers.
Now there's nothing wrong with that either, but I do think a lot of people
miss out on the real basics. The pleasure of a good muso on a "real" acoustic
instrument just sitting and playing to a small group of friends in a room.

Hit song distribution once occurred mostly when Mozart or a good "cover" pianist was playing in town. Meanwhile some local guy knew how to strum a few tunes on the guitar.

I don't think there's anything wrong with any way of being creative. There is, however, something wrong when the public thinks one artist is responsible, when in fact they sound amazingly different if left to their own devices. I also think we're missing out on a lot by not fully appreciating real, live, acoustic, organic music anywhere near often enough.

It feels to me somewhat like we invented sex toys and then somehow forgot what it's like to just be with another person. ;o)

We think we're expanding our horizons, but it seems that the ground behind is retreating as quickly as the ground in front advances. Every time we step further into computer land we forget a little more of what we left behind, and hence the horizon remains the size it was, only less organic.

I think I'll stop talking now. ;o)

Cheers,
Kim.

>OK, that's gettin' a bit creepy. Yes, it's amazing, and I can't even begin
to comprehend how someone figured out how to do this.

And maybe if I had clients, especially clients with limited talents, funds,
or patience, I might have use for this. And I can even see how it could be
handy as a composing tool.

But I don't have clients, and if I want to hear what my chording will sound
like in a different mode or whatever, I'll just play/sing it that way.
There only a couple ways I'm willing to "cheat": Editing the best parts of
multiple takes together, and punching in. When someone tells me they really
like my music and that I'm really talented, I don't ever want to be
thinking, "Well, yeah, but I can't really do that."

And besides, there are so many really talented composers and players in the
world who will never be fortunate enough to be widely recognized for it.
This is why I object to using technology to make up for deficits in real
talent and skill.

I'm with Hot Rod . . . just do the friggin' thing right. Or find someone
who can.

Sarah

>Just like with the very first version of Auto-Tune, the genie
is now out of the bottle... may as well plan to buy this new
thing at some point, becасue if it CAN be done, clients will
EXPECT it to be done.

I notice this sort of attitude all the way down to the simplest
things, such as:

1.) A project I did a couple years ago, wherein I instructed the drummer to get new heads before we started tracking... he didn't - he said "they sound fine" (IMO, they didn't - they were "useable" sounds, but they could've been a helluva lot better), as I was pointing this out during mixdown, he said "yeah, but you can fix that, right?"

2.) Another project I did awhile after that one where I told the guitar player & bass player to change strings the night before we started tracking - the guitar player did, the bass player didn't... ended up having to re-amp & process the hell out of his bass track in order to overcome the deadness of the strings.

3.) On the project I just started, when getting kick tones, we nailed a great one on the first try at mic placement (which I kinda have a good method for, but still, it's nice to nail it right away, regardless!), and the drummer was very pleased on playback of the test track, but nonetheless he happened to mention: "yeah, but still, all you really need is an impact of some kind, right?", indicating his belief that anything can be done once you have that.... which is not too far off, really.

It USED to be that a musician would complain if they didn't hear "their sound" coming through the monitors - now it's as if they don't care what it sounds like coming through the monitors, they expect you to be able to make it that way after the fact. Likewise, I've recorded singers that were VERY particular about how their tracks sounded and WANTED to re-do a line because their pitch was off (not usually the case with me at the board, because I'd have them re-do it while they were still on the other side of the glass if it was clear they missed it) or they didn't like a certain phrasing or dynamic, now it's pretty much: "You can fix that, right?" lol

Yes I can... and soon i'll be doing every part on your entire album for you, too - you just go mix yourself a drink or grab a beer; the bar's over there in the corner.

lol

>Bonzo wasn't really the "basher" that most people think of him
as... yeah he had a big drum sound, but i think that was partly
due to the 26" kick, and the way he tuned his snare (which was a
metal one - which makes a difference, as well); he really had
a lot of subtle finesse that he doesn't get much credit for.
Look closely at that video clip you posted - he's not hammering
with as much velocity as you might think!

Hardest-hitting drummer that I EVER saw was someone you wouldn't even think would play that way - at least based on his style - and that was Neil Peart of Rush... check it:

<http://youtube.com/watch?v=5lhELGjybR8>

Check out the overhead shot at 1:26, and then the cutaway/side-shot at 1:29... his sticks are moving like THREE TIMES the distance of Bonham's in the video clip you posted for Kashmir! And that's not even as hard as he used to hit 'em, either.

Neil (who's favorite Zep song is "Achilles' Last Stand" - see link below of an amateur video montage assembled over the studio cut of this song... a great Bonham track!)

<http://youtube.com/watch?v=-ArWLI908i4>

>Studio technology, and along with it the attitude people have, is getting
silly. Neil and DeeJ, you're both on the money IMO.

The question I guess is which art form you want to master. You can be a muso... a person who can play live. You can be a producer... a person who creates recorded works, often with little requirement to actually play anything. You can be a sucker who gets paid to be an engineer but is expected to take people who don't sound any good while playing an instrument and make it sound like they sounded good by, in fact, being an underpaid producer.

I assume that these bands who don't really sound like "their own" recordings aren't all that passionate about the music. Probably moreso about the groupies and other "benefits". ;o) Now I get the attraction to groupies and stuff, but at the risk of sounding old, why the world tolerates this whole fake stardom thing I really don't get. Milly Vinilly got crucified for not singing on their recordings, but it's seeming today almost like it would have been ok so long as they sung SOMETHING, ANYTHING, and then a computer used whatever, even if it was another vocal, to twist the piece of audio which they entered in the computer into something releasable.

I've got nothing against the technology. I mean in itself it doesn't hurt anything. The idea of being able to sit at a computer and have complete control, in the end, of every harmonic, every note, every hit, and be able to manipulate each and all of the above easily and quickly will, I'm sure, create astounding art, and there's no reason to be without that.

What is troubling, and in a way it's been happening for a while, is that people have forgotten the actual proper roots of music. Even the real "down to earth" music lovers who go and see local ba

performance for hours and hours.

I think the technology of Melodyne is cool for what it is, and could be a creative tool for creating new sounds that can't be played, but it could also be a massive time-waster. Getting the right performance should be done by the performer, not the engineer.

Regards,
Dedric

like....
Just as I expected! :)Ah yes, but just think of all the billable hours it would add to a
project to mess with all that crap!

One more reason to work on an hourly basis... "sure, I can fix it, but
it's gonna cost ya" ;-)

David.

You & I certainly have differing opinions on this aspect. I don't think what you're describing is being a "sucker" at all... it's simply a skill-set that you have the option to use, and to whatever extent you wish to employ it, based on the terms under which you've agreed to work on a given project. For example, what's the difference between - let's say Mutt Lange, getting involved with Def Leppard when he did, and taking them to a level that they probably never would have reached otherwise - and someone with a certain skill-set taking a not-so-great local band to some higher level than they could otherwise achieve without that individual's help? Or a pretty decent local band, for that matter... or a really good local band - I don't think it makes any difference, really. Yeah, we're talking a major difference in terms of the level of the industry between a Lange/Leppard project & one like I'm referring to, but inasfar as helping a client/band to realize their vision... what's the difference?

You always have the option of turning down a project if you think all you're gonna be doing by working with someone is gold-plating a turd... unless you do it for a living & you feel you HAVE to take every piece of business you can get, but good lord, it's STILL better than before we had all this kind of technology... "back in the day" you'd STILL have to work with wankers from time to time, you just couldn't help them as much as you can now - I'm betting there's almost no one who was a recordist prior to this era who doesn't have at least a few projects under their belt that they would rather not admit to having worked on.

>why the world tolerates this whole fake stardom thing I really

Well, it's all about the saleability of the product, not the quality of the product... which is not to say that there aren't people who care about the quality of the work they do, it's just that EVERY form of entertainment seems to have a shorter shelf life these days, not just music... movies, even good ones, hit theaters & then a few weeks later they're on DVD; a couple months after that they're on Pay-per-view, then HBO, etc, etc. It's rare for a movie, even a very successful one, to stay in theaters for anywhere near as long as they used to. Look at video games... used to be in THAT industry you'd be able to put out a good title & ride it for awhile - now you've got a lot of games that come out with a new edition every year.

So, you've got to look at the music biz as more of an "assembly line" process now... assemble it, package it, push it out the door... NEXT! Right? Which in a way is kinda the same way it was in the era that some consider to be the "Golden Age" of popular music... the Brill Building was chock-full of writers churning out songs, lower-level musicians demoing them, publishers buying 'em, then selling them to the big-name artists or their labels. Labels like Motown & entire cities like Nashville used top-notch session players who could nail stuff in a take or two, instead of using a feature artist's regular band, in order to save time/money/get a better track overall.

How much more "assembly line"-like can you get? It wasn't until albums like "Sgt. Pepper's" and "Pet Sounds" that bands would start getting really self-indulgent & spend inordinate amounts of time in the studio experimenting, tweaking... hell, WRITING in the studio! And for a brief, shining moment there - in that era when bands like Fleetwood Mac would famously spend a year in the studio working on an album - labels would actually let them. And I think people of the generation that most of us on this board seem to be in, came to think that that's the way it's normally done... we got spoiled, in a way.

But then again - a lot of those artists would have four or five

songs in heavy rotation on the radio at once! If you listened to rock or Top-40 radio in that era, artists like Steve Miller, Fleetwood Mac, Boston, Bad Company, Aerosmith, Foghat for a little bit there... damn the list could go on & on - all had SEVERAL hits in rotation at the same time! Martin's Air Supply stuff too, on the pop channels... how many freakin hits did those guys have on the air at once? Four or five, IIRC. Doobies, Queen, Manilow, Linda Ronstadt - just a few more that pop into mind that each had multiple songs on the air at once. You just don't see that happening all that much anymore.

Argh - that really digressed... ok, enough typing for now lol

NeilYeah, but all those billable hours add up to a stiff neck, a case of carpal tunnel syndrome and a hole in your spiritual stomach...

Drumagog into Paris?

SteveThis is why I'm very thankful to be outside music as a living now. A steady
paycheck and health insurance with a retirement plan is GOOD thing in my

view, and one I wondered for years if I'd have. For sure touring and playing offers no such long term benefits, and living on the road gets expensive. Taxes on contract musicians can be devastating. Today's shelf life on bands is so short that one can lose the game easily. I know there's not much 'cool' in the day gig, but it sure beats bein' cool and hungry/broke/divorced/homeless/addicted, as so many of my peers and friends have become.

Besides, working at a music store would only append debts for me :)

Gannt, take something you have learned along the way and apply it to another field. Look through hotjobs.com and the such, look at the descriptions and see what fits or is close to a fit. You are smart and capable, moreso than you're giving yourself credit for here.

God bless you for having so much more faith in me than I have in myself!
I actually checked out a job at Chuck Levin's Washington Music Center, our big local store (if you don't count The Guitar Center as local, which I don't!).
The pro sound manager spent a long time telling me about the good and bad points of the job. Mostly, it sounded like the internet and has totally changed the business for store's like WMC. The top salesmen are probably making \$50K - \$60K after 7 or 8 years on the job. Doesn't sound like much fun to me. I know that 20 years in the studio business has probably helped me build some skills that translate in other fields. I've been doing a lot of thinking about where to look for possibilities.

iness with their Windoz
boxes (or linux in deference to Thad), setting up office, connecting
them to the internet and secruing it is well within your grasp...just a
new vocabulary to learn.

Long winded, but just another one saying "GO for it".

You have to buy the pres and EQ via a separate rack units.
The bad part to this product to me is that it only uses the MAckie HUI &
MC controllers. That won;t cut it if you're a Steinberg, Logic, Sonar user.
HUI is very weak as a Pro Tools Controller..

I would like to see this kind of product WITH Euphonix deep EUCON control..
As if stand, the Tascam DM-32/48 is the best band for all-around DAW/Mixing
unit..

>>A grandfather, who got to baby-sit his granddaughter one day ever
week, always made a special effort to find some alone time each time
she visited.

Each week he would take her out for a drive in the car for some
bonding time.

One particular day however, he had a bad cold and he really didn't
feel like being up at all. Luckily, grandma came to the rescue and
said that she would take her out for her weekly ride.

When they returned, the little girl anxiously ran upstairs to see her

grandpa.

'Well,' grandpa asked, 'Did you enjoy your ride with grandma?'

'Oh yes, Poppa' the girl replied, 'and do you know what? We didn't see a single dumb bastard or lousy shit head!' I think this is my only resource y'all. Teri from Drumagog doesn't have a

clue, and her and Rim are in Germany in a trade show.

Anybody out there that can help me??

Stevie think you can patch in outboard pre's and EQ's. Thing is, you're getting charged as much as you would for a DM2000 which is a lot more flexible, I think, and has preamps.

I have psoted before the chart for waves.

I remember that C1 is 0 latent

Eq's are 0 latent.

Rvox, rcomp, rdeaser, etc are 64 samples latent.

That is what I remember.

Do a search to find the list...

;oD

I just really hate the new 2.0. It's absolutely wayyyyyy overblown with unnecessary crap that makes it basically scooterfucked IMO. If I buy EZ Drummer 2.0 and DFH Superior, will I have a decent sample library with percussion instruments and will I be glad I did or does it suck too? I just want something easy to use that sounds good. the only thing I can think of that suks worse then the new BFD is the old, original DFH.Man, DJ, I keep telling and recomending Addictive Drums. I have th eEZ drum kits as well, but Addictive is way better(Sounding) and it's layout is very easy,yet powerful.

BTW: The New Superior 2.0 looks to be in the frame work of Addicive drums.

the least..

I would go for the Dm-2000, due it's great sounding Pre's(24), he ability to mix 96 channels@96k, with Eq/ dynamics..8 Spx-1000 units..6 graphic eqs on the buses..Integration with Steingberg, Pro Tools, Logic and DP..For around 17k o start. Not Bad.

>I don't know Dedric. There seems to be this trend to adhere to the smaller foot-print studio from the DAW manufacturers. And this trend is coming from the EU DAW users. DAW users in the states want 24, 32 fader controllers and at least 16 channels of i/o.

Also, the trend to add DSP to the hardware i/o units negates the promise of Native's claim.

Just my Opinion: I don't think Steingberg is close to cracking the Multi-core puzzle. I think a Total Re-write would be required. But, I think they (Steingberg) will duck-tape a solution much like Digidesign has with Pro Tools to keep it going, even though the market has all this CPU power..

Even More: These days, I don't know where Steingberg's strategic direction is heading. Like, who's on first?

Dedric Terry <dterry@keyofd.net> wrote:

I'll stick with the rig I have for now . . .

>I looked at that when the video hit the net last year, but I can't see
spending \$6000 for a mixer to front end \$600 software/Sonar. If Steinberg is
able to ASIO nice latency figures I don't understand why you can't as well
but there you have it. The other thing being, granted I haven't heard the VM
personally, that I don't particularly like the sound of the Roland pres I
have used in the past. Some of the questions I had then still haven't really
become clear such as

Up to 40 tracks from mixer to sonar. 40 tracks of what resolution?
Can one choose less tracks at higher res? More tracks at a lower?
Just exactly how are they\are they compressing the audio, and what
artifacts? I do NOT like Roland VSxxx recorder compression.
Is computer connection strictly a data dump through a standard NIC, or ??
and how does Sonar see it?

Don't get me wrong, for a live mixer this thing is pretty awesome. I've long
since been a fan for the idea of preamps/audio processing staying on stage
to be controlled remotely, like the VM series Roland had years back. I

absolutely detest latency.
I'm not that sure it's a recordists dream, however.

It's unfortunate and apparant they can't get latency right with WDM/ASIO drivers after years of it. Which is a mind blower, because they were the ones working with Microsoft on the WDM spec. What they really probably ought to do is either expand their 'hardware' line (which is EDIROL already I believe) to more than the 'power' series of stuff and less than a \$6k REAC mixer. There's a whole lot missing there in the middle, and DSP + more inputs would fix it.

<http://www.cakewalk.com/Products/hardware.asp>

Shame, cause I love how sonar functions, but many won't move to it for semi-pro/pro work because of the latency they can't seem to lick. Steiny apparantly has beat that now with the Yammy interface.

<http://home.tiac.net/~cri/1998/bagel.html>

The following was seen attached to a plastic zip lock bag containing Cheerios.

WHERE TO PLANT BAGEL SEEDS

Any bright sunny location, preferably close to a delicatessen.

WHEN TO PLANT

Year around, but onion bagels grow best in winter, while poppy seed and pumpernickel grow well in summer.

CARE OF PLANTS

Plant in seven equal rows, running north and south. You may make the middle row longer. Join all rows with one long east-west row, for irrigation and to form a menorah. All seeds must be planted at least four feet deep. Any less depth and the hole in the bagel will not develop properly. Irrigate sparsely, with boiling water only!!

NOTE: Over-irrigation or cold water will cause your growing bagel to become soggy. Soggy bagels are not good for anything. . .

While it is possible to grow bagels topped with cream cheese by sprinkling the blossoms with fresh dairy cream, you should contact a professional bagel grower for expert advice. Some unkosher growers will use fertilizer, but that does affect the taste and texture, even if it does hasten the growth. However, those who like egg bagels have had success using fresh eggs as fertilizer.

TO EAT

Cut cross-wise. Never, never cut a bagel vertically. Ladle on lox and cream cheese (you were warned only experts could raise bagels already topped). Use when ripe. While day-old bagels may be toasted and eaten, any older and they tend to fossilize and are only good for missiles. Beware of over-ripe bagels!

GUARANTEE

If you are not 100% satisfied, dig up your bagel seeds and return. A BRAND NEW package of seeds will be sent to you.

> TCBMike, I haven't downloaded any of these newer plug-ins. But I believe you
should make it a requirement to pay something for downloading them. Heck why
not even set a minimum price so that you are rewarded properly for all of
your efforts. I seem to remember paying around \$50 smackaroos for NoLimit
and it was well worth it. It's just human nature to want to get something
for nothing, especially if you set it up that way, but I'll tell you
brother, nothing is free, except maybe air.

>Hi Lamont,

I have a DP/4, and I like the hall reverb in it far more than the hall in my Lexicon MPX1. It's just smoother, while the MPX1 has some grain to it. As long as work isn't too busy - and the algo doesn't end up as much trouble as the amp was - it shouldn't take me too long. I've got the .h file done. The .cpp file and the .ini should come quickly.

I agree that the donation system is too tempting for some. I would prefer to keep the pricing flexible. I don't want to deprive anyone of these plugins if they can use them. I just don't want to feel taken advantage of.

Let me know what you think of the plugs when you get to using them. Feedback is appreciated. :)

All the best,

Mike

>Hi Rich,

I think I just replied to you while replying to Lamont. I must not have had any coffee yet. :)

I'd like to keep the pricing flexible because some people are truly broke. I want everyone who can use a copy of these to have them. I just don't want to feel taken advantage of. Having 50+ copies downloaded with almost no comments of what people thought of them and very few donations felt kind of shitty. I know people are busy and don't have time necessarily to look at things right away. But I'll be honest, if it weren't for the few people who have been supportive and given me feedback on things, I probably would have stopped posting these.

I did some comparisons between the simalog JCM900 VST plugin, and I actually prefer the simalog. But, I'll still use this plug at least to have a sound while tracking, and also to add texture by varying the guitar sounds. It's also got a really nice clean sound now. It is very useful to me.

All the best,
Mike

Boycotting can be used as a threat / punishment when the boycotter is larger than the boycottee. Once a boycott is in place the impact is on both sides, so unless the boycotter is large enough that the boycott impacts their target more than themselves...?

Given China has a larger economy than the U.S. now, and given most of their trading is within Asia and Europe, having the U.S.A. boycott Chinese trade would be absolutely identical to simply asking China to boycott trade with

you. They're bigger. You'd only hurt yourselves. It would be like Iraq boycotting trade with the U.S... you'd be like "Umm, who cares? You're just hurting yourselves".

Sucks not to be the biggest eh...?

Cheers,
Kim.

RME Fireface for one - it has a second FW400 port for running multiple units
in parallel (FW800 connection to the PC/Mac side required).

From the ad blurbs it says the dsp is available in Cubase - which could be
simply like other firewire dsp boxes (Powercore, Duende, etc) that give you
VST access to onboard dsp plugins. That part could be tied to Cubase, but
though it doesn't say so, so my guess is the dsp is most likely VST, and the
audio is ASIO, so any VST/ASIO app should be able to use it.

I wouldn't go by a product demonstration as the final word. Wait until the
units hit the streets and/or more info shows up on it.

I also wouldn't sell your PCI/PCIe gear for a firewire solution... DJ. ;-)

Dedric. . . not to mention asking Americans to boycott anything is like asking
them to voluntarily give up their teeth. We are completely addicted to
comfort and convenience and in general would not give up so much as a single
square of toilet paper to make the world a better place.

Mike, I really appreciate your efforts on the plugs. I have download all
of them, but, and this is the truth, I havn't had time to load any of them
into my Paris comp yet. I fully intended to send you some dough once I loaded
them in, but I'll send you some now. I'll get around to installing them eventually.
Thanks for all your hard work!

They say not Zero latency, but No latency .. A non issue as far as they are concerned.

Who knows???

Hey Mike,
I have joyfully downloaded all of your work and tried to be
fair with my contributions each time. I am sorry to not have
commented on your amp plugin as of yet. I have not had a chance
to load it much less try it. I'm excited just the same!

Needless to say your work is keeping me motivated about my continued
success with Paris. I look forward to all of your releases and will =
gladly
contribute as usual. I have a couple buds that will probably be =

downloading=20
and contributing also.
Tom

"Mike Audet" <mike@....> wrote in message news:47ddcdaf\$1@linux...

Hi Rich,

Thanks for your kind words! This is a really new experience for me. =
I've
used the simalog plugins for years, and I never thanked the guy who =
wrote
those. I sent him an email this morning.

For me, I toil over them forever, and then get really excited to get =
them
out into the world, and it's just such a letdown when after weeks of =
work,
you get it out and there are zillion posts about other systems, =
politics,
whatever, and a new, real-time PARIS amp plugin gets almost no comment =
or
response. It feels like I made a huge dinner, lots of people came and =
ate,
but almost no one thanked the cook.

Anyway, I'll just have to grow some thicker skin, I think.

Cheers,

Mike

Hi=20
Rich,

Thanks for your kind words! This is a really new =
experience=20
for me. I've
used the simalog plugins for years, and I never =
thanked=20
the guy who wrote
those. I sent him an email this =
morning.

For=20
me, I toil over them forever, and then get really excited to get =
them
out=20
into the world, and it's just such a letdown when after weeks of =
work,
you=20
get it out and there are zillion posts about other systems,=20
politics,
whatever, and a new, real-time PARIS amp plugin gets =
almost no=20
comment or
response. It feels like I made a huge dinner, lots =
of=20
people came and ate,
but almost no one thanked the =
cook.

Anyway,=20
I'll just have to grow some thicker skin, I=20
think.

Cheers,

Mike
