and it has some pretty nice sounds: several decent drum sets, electric
bass, Rhodes, percussion, etc. Free. It's worth checking out.

It's pretty intuitive too. The only thing I have not been able to figure
out is how to split the drums onto separate channels, but it's got

to be
there somewhere...Hey all,

I've got some new goodies!

I've just released the "PARIS compressor". It's the original PARIS compressor algo before it was "crunched" to allow 16 compressors to fit on one EDS100 card. I've added meters (of course) AND

I fixed the sample rate bug in this and my previous two plugins!

If you hadn't heard, almost all the PARIS effects assume 48k for their calculations, even when they are working at 44.1K. Not these. They operate at the project sample rate. Can you hear a difference? You tell me!

you can download these at www.mikeaudet.com/ensoniq.ca or once the DNS goes through, simply at ensoniq.ca.

These plugins are released as "pay what you can" (ie - not free). I'm not a rich man, and I could use the help.

As always, let me know what you think.Deeeeewwwwwwwwwd..... As soon as these 15-18 hr days cease, I will be all over this.

Did you by chance fix it so that the Mac mmap bug is gone for the Mac users?

Question: can I run 'this' compressor also w/o causing problems on the crunched version that shipped with the Paris rigs?

AA

>Hi Aaron,

The PARIS Comp does not replace the stock compressor. You can run them both at the same time. I renamed the algo in the dsp source and recompiled it so that they wouldn't conflict. I guarantee that you will never run the stock compressor again, though.

I would really like to tackle the Mac stuff, but I don't have a Mac running PARIS and I'm pretty sure that I need a copy of Vi
