like, Mike Yanoska has graciously sent me some screenshots which are now on  
display here:

[http://www.kerrygalloway.com/WikiPARIS/wikka.php?wakka=Paris Skins](http://www.kerrygalloway.com/WikiPARIS/wikka.php?wakka=Paris+Skins)

\_Very\_ cool! Pretty inspiring, actually, the idea of keeping different  
copies of the .exe on hand to boot into different "looks". Tempts me to try  
my (unskilled) hand at skinning PARIS so it looks like a Neve or an SSL.

:DI'm In.

All it takes is one week of my being gone and look what happens..... PDC for Paris.

How cool is that? I should have left years ago.

;DIt IS pretty freakin' cool, innit?

There's a decent start there, composed of efforts of Dimitrios' I've found,  
plus the official WAVES latency specs.

The term "database" is actually technically incorrect at the moment; it's  
currently just a text list. The name reflects my intention to build it into  
an actual user-contributable, searchable database - just as soon as I  
decide/figure out how to do that.

For now, if you want to add a plugin that's not on the list - assuming you  
are logged in to the Wiki, just doubleclick on the page to open the editor  
and add the plugin to the bottom of the page as text, using something along  
the lines of the following format - PLUGIN NAME / [TAB] / LATENCY IN  
SAMPLES; just bring info and I'll take care of tidying it if needed.

Please contribute more as you find them!

- Kerry Hey guys, just wanted to check in and say hello to my Paris buddies. It has  
been quite some time since I last posted. Things have been very busy musically

and Paris is still the primary rig...that's right, I said it! :-)

Hope all is well with everyone...Cheers! Hey guys, what's everyone doing vocal chain wise? I'm using the following on most projects.

SE Gemini

Avalon 757Sp (a little tube vibe)

Neve Portico 5012

Urie 1178 <http://img170.imageshack.us/img170/3012/macpcom5.jpg> Really, \*really\* good luck with the UA610. It's pretty magnificent, particularly at the price point.

At first glance it looked like a pair of top-heavy, falling-down drunk stumblebums lying in an alley, until it clicked and I recognized it as a scene from the latest in the "Die Hard" franchise.

I think my first impression kinda nailed it, though.

ctly FaderWorks is more like a sophisticated series of automatically calculated delays - everything's still going to audibly shift to the right in relation to waveforms and previously-laid-in automation every time you put a plugin on it.

You'll watch the waveform go by and then hear the kick it crawled over a second later - it's just going to automate the process of calculating that and keeping sample-accurate relationship to the other tracks. This in itself

is a Very Good Thing - but all it's going to do is move everything later in time against the automation grid \*together\* in an \*automated\* and \*organized\* way.

I would be \*so\* delighted to hear I'm wrong on this. But my mind would be boggled to hear that Vertex figured out a way to give the VST slots a peek at audio far enough in advance of its arrival so that they could pass on, say, a one-second-delayed compressed kick at the time the Now Line hit it.

What the hell. I'm switching to XP anyway.

pabHmmm... That would be insanely cool.

Problem is - I don't think it's going to give \*true\* PDC, for this reason:

VST plugs can only play a sample as the Now Line crawls over it; they have no idea what the next sample's going to be.

So if I understand it corre

room mic on drums because I liked the slightly more distant sound. I used the DeeJ mic on acoustic guitars because I liked the 'closer' sound. Again, I'm probably not doing a good job describing here.

The mics sounded different enough that I decided not to use them as overheads, and I really wanted to use them. I wound up using NT-5s and they sound like crap. I think the drums on this CD are just going to suck, which is sad. The songs are good, the playing is good, the other sounds are good, but the drums just blow. Anyway, next time I'll have Claytorbuilt mics as overheads and on the toms, and the drums will kick booty.

Thanks for the Claytor and the Bottle, they're both getting serious use.

ThanksI have had problems for more than a year connecting to the NG. Often times  
when trying to connect my internet explorer would crash. I had posted this  
problem with no solution being found. This has significantly affected my  
usage of the NG and between being incredibly busy and frustrated with the  
crashes, I was forced to move on.

Having been away for sometime, I tried posting again and the usual occured....crash  
city...it would seem that if I tried enough times I would get through without  
understanding how I did it.

Well, I just found out that it seems my Google toolbar (not sure how or when  
I started using it), seems to be the culprit. I reset my IE to factory settings  
and all seems well...at least for now.

Now I can chat with my Paris buddies without hassel...life is good!Welcome back Tyrone! I use

Thunderbird, which is similar to Outlook Express. I find it much easier to read the NG this way

the count off on the left and feed only the  
left channel to the monitors.

I am going to get another little Sansa as a backup. They are pretty cheap.

[chrisl@adkproaudio.com](mailto:chrisl@adkproaudio.com) Hi Aaron,

The new Norton Ghost sucks balls! :)

Acronis True Image 11 is excellent as well as Paragon drive back up.

Paragon is probably a bit to techie for most folks though.

Chris

> [chrisl@adkproaudio.com](mailto:chrisl@adkproaudio.com)As expected, but sure is nice to be validated. My Toshiba Tablet R-15  
is  
DEAD silent no matter what I plug into it. I paid something like \$3500 for  
the Dell something like 6 or 7 years ago, and the tablet sold for \$2000, but  
I caught it on a close out at \$1000. I frankly prefer the Toshiba line  
IME/YMMV over the Dell offerings for music production, but you have to clean

the Toshiba crapware off, as with any other vendors machines.

I have found most of the UAD "noise" issues centre around the Fairchild emulation, and after adjusting the plugin to the desired settings, I will "render track to disk with Native Plugins" under the Audio menu in the Editor window, and then, of course, remove the Fairchild.

While I'm auditioning it, prior to rendering, I hit the space bar rapidly to stop and re-start the transport whenever noise occurs. This seems to eliminate it.

as often. I wonder if it's mostly compressors that are affected? I also  
find that hitting the space bar to stop and restart frequently stops the  
noise. I got tired of fooling with it. My last few projects have been UAD-1-less.  
I've considered switching from Mac to PC. That would make the newer UAD-1  
and Waves FX available for Paris, which they are not on a Mac in OS 9.

requires either more CPU power or RAM allocation? I know that RAM allocation  
is kind of a big deal in OS9 and older. Perhaps you can find a CPU/RAM usage  
meter of some sort for the native system that you can watch when you engage  
the plug in question.

Thanks,

Tedbut I'm wondering if my Liquid Mix

>(Firewire) plugs will also work. Anybody?

That is - on a PC running XP...

It even runs Ubuntu

<http://www.datamancer.net/steampunklaptop/steampunklaptop.htm>

DCI'd be intensely and immensely interested in the results of such an experiment!

Yes.  
Mainly to see if the hardware will work on current hardware. \

With it getting harder and harder to find old PC motherboards, CPUs and such I think it would be a good thing test.

I'm already working on getting a basic 1 card 442 setup to do a test with.

If that is successful then then it will be worth pursuing the multi-card setups.

The multi-card setups would probably only be useful in a Magma chassis though sense newer motherboards will only have 2 or 3 PCI slots at best.

I like his Ford pickup truck. He does have a very strange sense of humor,  
as evidenced by this:

<http://www.datamancer.net/fetuses/fetuses.htm>

I used to do stuff like this back when I took lots of drugs.

;) <http://apnews.excite.com/article/20080501/D90CKCMG0.html> I was reading some tech info on  
the UAD websight last night and noticed this.

"Matrox G4xx graphics cards users will experience distortion in Audio Export/Processing  
results if UAD plugin windows are open during processing.

Workaround: Close all UAD plugin interface windows before performing Audio  
Export/Processing."

I've been using a Matrox G450 forever, and don't notice distortion, but there  
are the usual clicks and occasional dropouts when using a UAD plug on a track  
with edits. (yes, I'm using the drivers from windows, not the crap ones from  
matarox) I render the track, solve the problem. I was wondering though if  
it might be a good idea to switch to a different vid card to see if that  
fixed the problem. If so what would you suggest?

I'm still running the Asus A7S333 mobo. I figure it wouldn't be too expensive  
to get something else and experiment.

Rod I hate to type.
