I told the guitarist to ask the engineer what exactly his role was to be
as it was defined by the band member(percussionist)
that set up the service. The engineer was not hired as a producer and was
just to be a recording engineer. I understand that. I am

that they are still going to be over priced. Although, some of you guys wouldn't think twice about paying 3K for a mic, a pre, or reverb unit.

The mic, etc, wouldn't be worth 1/5 the price in a year and a half when Apple decides to screw their customer again.

;o)

impressed with the Windows XP performance.

Simply put, the Macs run Windows better than some PCs out on the market.
Very impressed.

As for AMD. Wow!! My last new system I assembled (April 06) was a Dual core
Opteron/939 chipset. It did not run Paris, but, it's abest for ProTools (7.1)

and Nuendo.

It lloking like Intel is about to reclaim the speed game. I really don;t knwo how AMD let Intel back into the game ??? Since the Opteron was so much ahead of Intels offerings.

Well, the ood new for me and others is the Higher speed Opterons price will continue to fall!! That means setting up a a fast DAW for recoridng, VSti's will alot lighter in the wallet\$\$\$. I'll continue down the AMD path while the prices are dropping.

No need for me and others to et caught up in the \$\$ expensive speed game. Nope..I'll wait around like the Vultures :) and make due with the good O'l Slow Dual Core Opterons. Oh woe is me!! :)
