REcycle is pretty much a dead app at this point.
All the major audio apps now Cubase/Nuendo, Sonar, Ableton, Pro Tools,
Samplitude all offer audio quantizing on one of more tracks at a time.

I think you're right. The ability to use plugs that won't run in Paris, and the automation features other DAWs offer are real compelling reasons to look for alternatives. And, as Dave seems to be pointing out, my ears and sonic expectations are not what I have to sell to. In fact I'm also working on another DAW (on a G4 in fact!) and trying to integrate this with Paris.

Good luck in your efforts :-)

> It wasn't a lot and it didn't stick, but it happened. Sept 9th is as early
as I've ever seen it happen here. I've seen it happen in the middle of
October and that is considered pretty rare.

It's cold outside tonight. I've been trying to find a couple of cords of oak
firewood today. It's going to be a long winter, it seems.

DeejThese things seem to have some qualities relating to stereo imaging that are
very obvious. I don't think I've ever used a pair of monitors where the
stereo image would seem to shift so drastically when moving even a little
bit outside the sweet spot. At the same time, when monitoring in the sweet
spot, it's very obvious where the various instruments lie in the
soundstage.

Combining these with a subwoofer is absolutely necessary in my room as they are 5' from the back wall of the CR and there is no standing wave action happening in the CR to reinforce any of the LF at all.

I'm enjoying learning these monitors. It's becoming more and more obvious to me why these have been a staple in studios for a long time.....plus.....like 90% of everything else here, including me.....they're obsolete!!!!!!That's about my take on 'em too man. In some ways, I kinda miss having that overachiever stereo thang they did so well.

>AhHA!!!.....so my ears aren't playing tricks on me eh? At my age, I don't
trust nuthin' no mo. I've been listening to a lot of program material on
these today that is similar to what's happening here (Dixie Chicks, Alison
Krause and a little Norah Jones and it's pretty amazing how the stereo image
of these monitors seems wider in a nearfield (4' equilateral) config than my
NHT's do in midfield (7.5' equilateral) config. The NHT's have a lot broader
overall frequency response but don't have as much of that stereo mojo going
on. I thought the NS10's might be out of phase there right at first, but it
was just my moving out of the sweet spot a little bit.
