Do you mean FL Studio 7? Can you get MIDI into this from an external source

for loading VSTi instruments inside Paris and triggering them from an external sequencer?

Thanks as always.

GeneDoes anyone have links to good resources for optimizing XP for audio recording?

Or

Any suggestions.

I have two 7200 rpm drives and two 10k rpm sata drives.

How should I configure XP (install)...swap fil?... etc...

Thx,

BI have been steering away from USB interfaces. I guess for limited tracking these would be fine though. It looks like the Lexicon Omega has some pretty nice I/O features. Amy likes to hear some reverb in the cans when she's

singing. I guess the Pantheon could be monitored while tracking in a limited input way, or the insert points on the Omega could be set up to be used with an outboard box like the Alesis Wedge (very cool box for reverb in a cue mix)

>>A producer I work with also is a building contractor and cabinet maker. Last night he proposed to me to build us a house and recording studio on a 9 acre tract of land that he has located in this area south of where we live now. We would share ownership of the property with him carrying the note for our portion and he would build a big barn on the property for his contractor office and woodworking/lumber storage. this would also be perfect for our horse operation as they would have plenty of pasture and space to *be horses*.

The house and studio would be separate buildings. We would want the studio to be build in such a way that if we ever sold the place, it could be easily converted into a separate guest house so it will have a bathroom and a kitchenette. I'm thinking of a control room, main tracking area and an iso booth. We could mount glass where necessary for visual reference and this could be removed and rocked over if the place ever sold and was used for a guest house.

Tight now we're renting and though there are advantages to this (as in we get to write off almost the entire amount on our taxes) there is no equity being accumulated. this proposal would basically provide us a no money down scenario to get into a brand new house and studio. If the numbers work, we could pull it off for around what we are paying right now for rent.

I need some sources/ideas for such a situation. He understands the basics of that I need because he custom build the goboes/acoustic treatments I'm using here and he met with fellow Parisite and studio construction guru Emmitt Siniard when he came out here to help me set this place up when we first moved in. cost effectiveness is a big concern here.

> Hey, don't call it totalcrap. I think it's awesome personally.

You just use SUBMIX mode if I'm correct. In total mix you pick submix and from there each of the top two rows (hardware input) and (computer input) can have any of their tracks routed to ANY of the 24 outputs plus spdif. When in this mode, each time you click on the outputs of any of the first two rows you will get a list of ALL outputs that you can route each channel to with check marks to indicate which are being sent.

I think you then open the matrix with "x" and you can see / change all the routings there too.

Rock on!

 >Hi Aaron,
 TC are th only one that I'm aware of right now that have had these
 issues in a long time. I think they might have got lazy with testing it
 with some software. Sonar isn't a popular program overseas compared to
 Cubase, logic, PT , DP, even Samplitude.

What do you mean by midi/wav lock and playlist?
 And what do you mean by Live?
 Live recording?
 Live VSTi triggering?
 Live effects processing?

Chris

ked with midi click/program
changes/lighting commands and I need it in a quick and editable set list
formation.

No VSTi/DXi, no live FX processing. I've been using a Firewire Audiophile
with a VAIO but that's been pretty mixed results as the VAIO pretty much
sucks dung. Ditto the DELL inspiron 8000 I tried previously - it worked
flawlessly for days on end looping and the moment I took it out it developed
a bad attitude. Took it home, all's well. Go figure on that one, but I'm
looking to use my Toshiba Tablet now and I can't imagine it wouldn't cut it
here, but I'm not willing to get beat up if I can avoid it.

I've tried both onboard FW and a PCMCIA card. Card seems to be a little
happier, no surprise. Via chipset on the PCMCIA.

Thoughts?

AA

about this stuff. The other day I went to play guitar and nothing worked,
I left the cable plugged into the wah and the wah died. So I removed it
from the chain and the amp didn't work. I said screw it and decided to play
bass. Nothing doing. I left the cable plugged into that and the battery
for the active pickup died. hahahaha
