Anyone out there with any experience with the Asus A8R-MVP and Cubase 4or A8R as a DAW in general?

Any tips?

Thanks a bunch,

JonHi Jon,

It's the last of the usable x2-939 motherboards. Not sure I would bother with it now though. The board has been discontinued and is a dead end for upgrades and such.

If you are looking to up grade from a pre 939 based AMD system then it will be a waste. At this point I would only recommend a Intel Core 2 Duo 975 chipset based system.

Significantly faster better upgrade path and can be got for similar prices.

Chris

And this is why I love this freakin' family.

I watched what was probably two shill bidders notching the price up for a while, but sat there and held back.

Was looking real good. A MEC, C16 and 8in for \$160? I had wood just thinking about it.

Then I watched The jump in.

Shit. "I'm done now."

But still sat back and waited.

Dropped my snipe bid of \$301 in with 9 sec to go.

Got it for \$265 plus shipping. And I got all three freakin' p
