[illegible]

could cause these issues?

I'll remove them from the setup until all is well.

I know at least a few times it worked that the C-16 did also.

Tom

"Jeff Hoover" <mailto:jkhoover@excite.com> wrote in message <news:4699b378@linux>... Tom, Stupid question, but did you ever start up without any c16's? If so did you see the same issue?

Thanks Aaron. I'm moving the small stuff up to an open area with another comp right now.
I'll begin my madness shortly. I don't have Excel but I am wicked good with chisel and stone.
I'll post when something turns up to get your opinion(s).

Tom

"Aaron Allen" <know-spam@not_here.dude> wrote in message =
news:469c5774@linux...

Tom, you may find it useful to print out an excel trouble shooting =
chart and check off the items as you tag them good/bad. I find that =
keeping up with 'everything' on a deal like this (IE, never enough time =
to just do it all in one sitting) is just about impossible. Label each =
'part', give it a proper set of troubleshooting criteria (like say, SCSI =
cable 1, 2, 3, 4 or EDS 1,2,3,4 and label each part with gaff tape). If =
you come up on a bad MEC, pull all expansion cards and make sure that's =
not biting you. Don't forget to mark what expansion came from what slot =
in what MEC.=20

Just be methodical man, I know you'll find it.=20

Intermittant success is the best I've got right now.

I plan to install Paris on another comp, try each EDS
individually and each SCSI cable individually with the 442. If
all goes well or not I will have an answer. Next, try the same =
in=20

the actual Paris rig without the Magma. If I can get regular
Paris boots there then it's the Magma power supply
or Magma cable. I'm thinking power supply. I always
had all 5 EDS cards showing even when the hardware

attached to them wasn't.

Does this sound like a logical approach to you?

I'm sick of chasing my tail.

Tom

"Aaron Allen" <know-spam@not_here.dude> wrote in message =
news:469bfc6c@linux...

I don't s'pose it could hurt if they're tarnished. My =
experiences though with the issue your seeing have been bad SCSI cables. =

Start small, test every little component, unless you've got a =
bent up input pin somewhere (and I'd light them well and magnifying =
lense them all) I'm having a hard time buying that you have 4 dead =
cables out of the blue though, something caused that if it's the case.=20

AA

Bpgwire rats hahahaha

could this be Dj's car ;-) kidding DJ

http://www.horseapple.com/Valkyrie/Tech_Tips/Jammin_with_Blaupunkt/blau-rats-nest.JPGHmm . . . we got ours in 2000? 2001? Somewhere in there.

China huh? Bummer. Is anything good made in China, or does it all have melamine to boost the protein readings?

Didn't Mackie always use "made in USA" as one of their selling points?

S

Check out <http://www.quested.com/s/> and read the reviews
<http://www.quested.com/reviews/>
There seems to be a new distributor for the states.
At the moment I'm checking the S6, S7 and S8 models. They sound great and
very balanced and produce a very nice and tight bottom end, the three of
them, and I'm having a hard time to choose, depending on room size and wether
they are used with or without the SB10 (sub woofer).
For the moment I'm leaning towards the S7, great on their own and even better
with the SB10.

All the best with your choice.

Ab

(859) 635-5762The quality of the workmanship is actually not that bad...

they have come a long way in the last 10 years. The issue is with the parts. They use lower quality metals (pot metal instead of billet etc) wider tolerance parts, crappy woods, etc. Some companies like QSC have built factories there but still use good parts, and QC the stuff in the States before it gets packed. The RMX series of amps for instance are made in China but still come up to QSC spec. If Behringer had not come into the market place, many pro audio products would probably still be made in the US, but then again...

\$\$\$\$ wins out...

David.
