-----060305020104070300000708--I've seen that one - it's way cool but I have one
comment. I don't think
that the flat monitor angle will work well w/ today's LCD screens. I have
mine low too but when they get too flat I can't see 'em.

Gantt

re are 6 rack spaces
off to the far left for the tt patchbay. Most of the rack gear is on either
side
of the desk. Two racks to the right along with my midi work station. That
is
now 2 x 22" LCDs with Cubase. Both Paris and Cubase are visible in both
locations. Three racks (wooden rail) to the left with mostly compressors.
The machine (barely visible to the right) houses the computers, magma
and Mecs x 4. It is behind a 5' glass door slider.

I don't actually have the plans to this since it was conceived by me but
built
by another gentleman. He did some mighty fine work I have to say. It is
ergonomically very nice. Low enough that my thighs can touch the bottom
of the desk while on my toes.

Tom

-----It is a sweet desk.. I must have
dreamed about it and in that dream the
monitor angle rotated.. :)

I think that's pretty much perfect for Paris.. except maybe a bit wider
with one more c16 :)

Cheers,

TC

I still think Tom's desk is ideal, it seems like BT's would be maybe a
bit tight with the displays being so close.. I sure wouldn't complain
though..

Cheers,

TC

One thing Kerry might consider if he decides to mimic my desk
is the resonance the wood cavity creates. I've considered blowing

foam into it. There may be a better idea but it does have a pitch of it's own.

TC, you won't need more than one C-16 if the motorized job gets happening!!!

Gantt, you are correct with the monitor angle business. The reality is that many folks ignore that reflection in their environments. They just set up the old LCDs wherever they look best. As long as your mixes translate who cares really.

That's an awe-inspiring thing, to be sure. Was that in its "Largest DAW
On The Planet" heyday?

- K

PS: who is Popeye-X? Hardly any of the PARIS links, like the SMPTE,
seem to work any more. Here is yet another idea for ya Kerry, I am actually modifying the desk a
bit as we speak, moving my speakers up, back and in behind the edge of my
flat screens. This is an older pic as well, most of the racked stuff is
changed around, got all my pres on the right side now and two MECs on the
left, different monitors. Sorry bout the quality, just a screen grab off my
webpage. Contact me if you need better, more detailed pics.

Hi Rob,

Yes, I did, thanks! :-) Behind the wood slats is a layer of Ozite, then a *PILE* of insulation where the large soffit monitors and old automation computers and screens used to reside. It makes a really big bass trap that tightened up the response of the room immensely, and greatly improved imaging. There is a large port that you can't see (it's even hard to see standing in the room) top / center that vents hot air from the computer rack on the left. I plumbed a duct from the studio air conditioning into the front of the rack. The cold air goes down inside the glass doors and gets sucked into the computers (Pic #1). The warm air is blown out the back and pressurizes the rack, forcing the hot air out the 10" round vent passively. I added a 2' conduit that is hiding in the center for access to cable a large flat screen monitor should we decide to add one later.

The console was built entirely out of 3/4" MDF... 8 sheets of it. It weighs a ton, but doesn't resonate at all. The three sections of the console sit on two 3" HSS steel tubes, that sit on the pedestals (Pic #2). The pedestals have openings on the back for cables to go up to the console keeping all the cabling out of sight (Pic #3). I made patterns for all the pieces and router cut all the vertical panels from the patterns so everything fit together perfectly (Pic #4). The large hole is for a cable-way between sections, and the small round holes were used with a guide collar to router-drill the side panels so the sections could be bolted together.

David.

-----090507060708090300090405--Hi Chris,

Sorry to be a pain... What Intel board would you recommend... we can get
the Intel models at wholesale. If the Can \$ was doing better I would
order a system from you! :-(

Many thanks...

David.

>Hi David,

The only boards from them We found usable and reliable out of the box have been the DP35 we
have discussed and the D5400XS Xeon board.

We have had good luck with the nForce 750 and 780 boards as well as some of the P45 chip set
boards.

Are you upgrading the guts of another system our building one from the ground up?

Chris

chrisl@adkproaudio.com A *big* thanks to you folks who have contributed your designs - some beautiful work there!

This has sparked some interesting thoughts over here - more to come shortly.

- KThat's huge news.. I'm totally in. For me it will be well worth whatever it costs to get motorized faders with paris.

Cheers,

TC

point to run paris on xp, with the adat drivers etc. that Mike has come
up with, as well as the new effects, plus I no longer have a g3 or g4
kicking around to run os9.

Maybe that's something to consider. My pc system was around \$200, with
all new parts, (except hard drives that I already had).

Cheers,

TC

>I really wish I could have got the Mac plugs working last summer. I literally spent weeks trying to get them to compile with no success at all. I really, really tried. It's something that I'd like to return to someday, but right now, the drivers seem to me to be the biggest contribution I can make with what time I have. I just wasn't getting anywhere with the Mac plugs.

All the best,

Mike

>>How about more info. What is your hardware? 1 EDS, 1 MEC?

Do you have SPDIF connected in a loopback? Do you have a mic in monitor mode feeding back? Can you post a screen shot of your routing ?

>Herml have to confess to getting close to pulling the trigger on a PC system for Paris. Kerry has me about 80% convinced and flying faders (along w/ Mike's new FX!) could tip the scales. I've also become a bit more PC savvy since doing ebay listings for a shop here in Maryland. I've been working on a Toshiba laptop. It's ain't a Mac but it ain't all bad...

So how do I go about putting together a smokin' Paris PC?
